Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives or www.iec.ch/members_experts/refdocs).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents) or the IEC list of patent declarations received (see patents.iec.ch).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html. In the IEC, see www.iec.ch/understanding-standards.

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 34, *Document description and processing languages*.

This fourth edition cancels and replaces the third edition (ISO/IEC 29500-2:2012), which has been technically revised.

The main changes compared to the previous edition are as follows:

- Where appropriate, normative references have been updated to use undated or more recent versions of other standards.
- [Clause 3](#) (Terms and definitions) has been revised by removing terms not used by any normative clauses and then reorganizing terms into groups.
- The subclause for diagram notes (5.1 in the preceding editions) has been removed, since core properties are now defined by prose and schemas rather than by diagrams.
- The clause for acronyms and abbreviations (Clause 6 in the preceding editions) has been removed, since it does not make sense for an ISO/IEC standard to define "ISO" and "IEC".
- [Clause 6](#) (Abstract package model, Clause 8 in the previous edition) has been completely rewritten. In particular, (1) pack IRIs have been defined in this clause rather than in an annex, (2) a new subclause, "Resolving relative references", has been added; (3) part Relationships parts and package Relationships parts have been distinguished; (4) base IRIs have been clearly defined; and (5) handling of non-ASCII characters in part names has been clarified on the basis of RFC 3987.
- The option for media type to be an empty string has been removed, as this conflicts with the definition of media type in RFC 2046 and the existing regular expression defined in the schema referenced by [C.2](#).

ISO/IEC 29500-2:2021(E)

- [Clause 7](#) (Physical package model, Clause 9 in the previous edition) has been slightly revised. Interleaving has been introduced before logical item names. Percent-encoding and un-percent encoding of non-ASCII characters have been explicitly introduced in [7.3.4](#) and [7.3.5](#).
- [Clause 8](#) (Core properties, Clause 10 in the previous edition) has been rewritten by using prose and schemas rather than diagrams.
- [Clause 10](#) (Digital signatures, Clause 12 in the previous edition) has been thoroughly revised. In particular, this clause now makes clear a convention for the choice of algorithms for signature and digest methods, which reflects the ongoing development of algorithms since the first edition of this document.
- [Annex A](#) has been made informative.
- The normative annex that defined pack IRIs (Annex B in the preceding editions) has been dropped. Pack IRIs are now defined in [Clause 6](#).
- [Annex C](#) and [Annex D](#) (Annexes D and E in the preceding editions) no longer define schemas but reference externally defined schemas.
- Guidelines for meeting conformance requirements (Annex H in the preceding editions) have been dropped.
- Requirements around streaming consumption have been dropped.
- Wherever possible, requirements on programs have been rewritten as those on data.
- [Annex H](#) has been added to depict an example package.
- The Index (Annex J in the preceding editions) has been deleted.
- Bibliography has been added.

A list of all parts in the ISO/IEC 29500 series can be found on the ISO and IEC websites.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html and www.iec.ch/national-committees.

Introduction

ISO/IEC 29500 (all Parts) specifies a family of XML schemas, collectively called Office Open XML, which define the XML vocabularies for word-processing, spreadsheet, and presentation documents, as well as the packaging of documents that conform to these schemas.

The goal is to enable the implementation of the Office Open XML formats by the widest set of tools and platforms, fostering interoperability across office productivity applications and line-of-business systems, as well as to support and strengthen document archival and preservation, all in a way that is fully compatible with the existing corpus of Microsoft® Office¹⁾ documents.

This document includes two annexes ([Annex C](#) and [Annex D](#)) that refer to data files provided in electronic form.

The document representation formats defined by this document are different from the formats defined in the corresponding Part of ECMA-376:2006. Some of the differences are reflected in schema changes, as shown in [Annex G](#).

This fourth edition preserves all previous functionality and adds no new functionality.

1) This information is given for the convenience of users of this document and does not constitute an endorsement by ISO or IEC of the product named. Equivalent products may be used if they can be shown to lead to the same results.

Document description and processing languages — Office Open XML file formats —

Part 2: Open packaging conventions

1 Scope

This document defines a set of conventions for packaging one or more interrelated byte streams (parts) as a single resource (package). These conventions are applicable not only to Office Open XML specifications as described in ISO/IEC 29500-1 and ISO/IEC 29500-4, but also to other markup specifications.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
