Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Group Specification (GS) has been produced by ETSI Industry Specification Group (ISG) Network Functions Virtualisation (NFV).

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Executive summary

The present document studies how interoperability test methodology can be applied to NFV by analysing some of the core NFV capabilities and the interactions between the functional blocks defined within the NFV architectural framework required to enable them.

Introduction

The present document provides methodology guidelines for interoperability testing of NFV features, starting from a review of some basic concepts for interoperability testing and their fit in an NFV environment and a methodology for the development of interoperability test specifications illustrated with examples of basic NFV operations. A high level analysis of some core NFV capabilities allows to identify a generic architecture for the associated System Under Test configurations, and to classify some initial Interoperability Feature areas.

The present document is organized as follows:

- Clause 4 provides an overview of common interoperability concepts and testing methodology guidelines.
- Clause 5 identifies a generic system under test (SUT) architecture and some initial SUT configurations for interoperability testing of basic NFV capabilities.
- Clause 6 identifies and analyses some initial NFV interoperability feature areas and outlines for each of them the impacted functional blocks and interfaces, as well as the applicable SUT configurations described in clause 5.

1 Scope

The present document provides some guidelines for NFV interoperability testing and identifies a generic System Under Test (SUT) architecture for NFV, some initial SUT configurations, and some interoperability feature areas derived from core NFV capabilities.
