**AN AMERICAN NATIONAL STANDARD**

**The American Society of  
Mechanical Engineers**

Two Park Avenue • New York, NY • 10016 USA

Date of Issuance: January 18, 2018

The next edition of this Standard is scheduled for publication in 2019.

ASME issues written replies to inquiries concerning interpretations of technical aspects of this Standard. Interpretations are published on the ASME Web site under the Committee Pages at <http://cstools.asme.org/> as they are issued.

Errata to codes and standards may be posted on the ASME Web site under the Committee Pages to provide corrections to incorrectly published items, or to correct typographical or grammatical errors in codes and standards. Such errata shall be used on the date posted.

The Committee Pages can be found at <http://cstools.asme.org/>. There is an option available to automatically receive an e-mail notification when errata are posted to a particular code or standard. This option can be found on the appropriate Committee Page after selecting “Errata” in the “Publication Information” section.

ASME is the registered trademark of The American Society of Mechanical Engineers.

This code or standard was developed under procedures accredited as meeting the criteria for American National Standards. The Standards Committee that approved the code or standard was balanced to assure that individuals from competent and concerned interests have had an opportunity to participate. The proposed code or standard was made available for public review and comment that provides an opportunity for additional public input from industry, academia, regulatory agencies, and the public-at-large.

ASME does not “approve,” “rate,” or “endorse” any item, construction, proprietary device, or activity.

ASME does not take any position with respect to the validity of any patent rights asserted in connection with any items mentioned in this document, and does not undertake to insure anyone utilizing a standard against liability for infringement of any applicable letters patent, nor assume any such liability. Users of a code or standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, is entirely their own responsibility.

Participation by federal agency representative(s) or person(s) affiliated with industry is not to be interpreted as government or industry endorsement of this code or standard.

ASME accepts responsibility for only those interpretations of this document issued in accordance with the established ASME procedures and policies, which precludes the issuance of interpretations by individuals.

No part of this document may be reproduced in any form,  
in an electronic retrieval system or otherwise,  
without the prior written permission of the publisher.

# FOREWORD

This Standard is intended to serve the global nuclear industry responsible for the safety and quality of nuclear facilities and activities.

It is intended to be applied to any structure, system, component, activity, or organization that is essential to the safe, reliable, and efficient performance of a nuclear facility and any activities independent of a facility that may affect performance. It is also intended to be applied to all phases of a nuclear facility life cycle and to related activities.

This Standard reflects industry experience and current understanding of the quality assurance requirements necessary to achieve safe, reliable, and efficient utilization of nuclear energy and management and processing of radioactive materials. The Committee on Nuclear Quality Assurance (NQA) actively endorses the growing worldwide movement toward rational, cost-effective quality assurance practices — practices that focus on results. The NQA Committee also maintains liaison with national and international groups that have similar interests in quality to assure consistency and maximum applicability of the Standard in a global setting. Consequently, the NQA Committee has regularly updated and revised the Standard since its first edition was issued in 1979 to improve its utility, effect on nuclear safety, and value to the nuclear industry.

This Standard includes requirements and guidance and is organized in the following four parts:

(a) Part I contains requirements for a Quality Assurance Program for nuclear facility applications.

(b) Part II contains additional quality assurance requirements for the planning and conduct of specific work activities conducted under a Quality Assurance Program developed in accordance with Part I.

(c) Part III contains guidance for implementing the requirements of Parts I and II.

(d) Part IV contains guidance for the application of NQA-1 and comparisons of NQA-1 with other quality requirements.

Early in 1975, the American National Standards Institute (ANSI) assigned overall responsibility for coordination among technical societies and development and maintenance of nuclear power quality assurance standards to the American Society of Mechanical Engineers (ASME). The ASME Committee on NQA was constituted on October 3, 1975, and assumed responsibility for the ANSI/ASME N.45 series documents. Currently, the NQA Committee operates under the ASME requirements for Nuclear Codes and Standards Development Committees.

This Committee initially prepared

|                      |   |
|----------------------|---|
| ANSI/ASME NQA-1-1979 | Quality Assurance Program Requirements for Nuclear Power Plants |
| ANSI/ASME NQA-2-1983 | Quality Assurance Requirements for Nuclear Power Plants         |
| ANSI/ASME NQA-3-1989 | Quality Assurance Requirements for High Level Waste Management  |

For a detailed history of the NQA Committee and evolution of the Standard, go to: <http://cstools.asme.org/csconnect/CommitteePages.cfm?Committee=O10500000&Action=16897>.

Requests for interpretation or suggestions for improvement of this Standard should be submitted in accordance with Correspondence With the NQA Committee.

For a listing of the NQA publication history, refer to the following table:

| 12th Ed.             | <b>NQA-1-2017</b> | 1/18/2018  |                      | ...               | ...        |                      | ...               | ...       |

GENERAL NOTE: NQA editions and addenda prior to 1989 were titled ANSI/ASME NQA.

NOTE:

(1) This edition is a consolidation of NQA-1 and NQA-2.

## (17) CORRESPONDENCE WITH THE NQA COMMITTEE

**General.** ASME Standards are developed and maintained with the intent to represent the consensus of concerned interests. As such, users of this Standard may interact with the Committee by requesting interpretations, proposing revisions or a case, and attending Committee meetings. Correspondence should be addressed to:

Secretary, NQA Standards Committee  
The American Society of Mechanical Engineers  
Two Park Avenue  
New York, NY 10016-5990  
<http://go.asme.org/Inquiry>

**Proposing Revisions.** Revisions are made periodically to the Standard to incorporate changes that appear necessary or desirable, as demonstrated by the experience gained from the application of the Standard. Approved revisions will be published periodically.

The Committee welcomes proposals for revisions to this Standard. Such proposals should be as specific as possible, citing the paragraph number(s), the proposed wording, and a detailed description of the reasons for the proposal, including any pertinent documentation.

**Interpretations.** Upon request, the NQA Standards Committee will render an interpretation of any requirement of the Standard. Interpretations can only be rendered in response to a written request sent to the Secretary of the NQA Standards Committee.

Requests for interpretation should preferably be submitted through the online Interpretation Submittal Form. The form is accessible at <http://go.asme.org/InterpretationRequest>. Upon submittal of the form, the Inquirer will receive an automatic e-mail confirming receipt.

If the Inquirer is unable to use the online form, he/she may mail the request to the Secretary of the NQA Standards Committee at the above address. The request for an interpretation should be clear and unambiguous. It is further recommended that the Inquirer submit his/her request in the following format:

|                         |   |
|-------------------------|---|
| Subject:                | Cite the applicable paragraph number(s) and the topic of the inquiry in one or two words.   |
| Edition:                | Cite the applicable edition of the Standard for which the interpretation is being requested.  |
| Question:               | Phrase the question as a request for an interpretation of a specific requirement suitable for general understanding and use, not as a request for an approval of a proprietary design or situation. Please provide a condensed and precise question, composed in such a way that a "yes" or "no" reply is acceptable. |
| Proposed Reply(ies):    | Provide a proposed reply(ies) in the form of "Yes" or "No," with explanation as needed. If entering replies to more than one question, please number the questions and replies.   |
| Background Information: | Provide the Committee with any background information that will assist the Committee in understanding the inquiry. The Inquirer may also include any plans or drawings that are necessary to explain the question; however, they should not contain proprietary names or information.                                 |

Requests that are not in the format described above may be rewritten in the appropriate format by the Committee prior to being answered, which may inadvertently change the intent of the original request.

Moreover, ASME does not act as a consultant for specific engineering problems or for the general application or understanding of the Standard requirements. If, based on the inquiry

information submitted, it is the opinion of the Committee that the Inquirer should seek assistance, the inquiry will be returned with the recommendation that such assistance be obtained.

ASME procedures provide for reconsideration of any interpretation when or if additional information that might affect an interpretation is available. Further, persons aggrieved by an interpretation may appeal to the cognizant ASME Committee or Subcommittee. ASME does not "approve," "certify," "rate," or "endorse" any item, construction, proprietary device, or activity.

**Attending Committee Meetings.** The NQA Standards Committee regularly holds meetings and/or telephone conferences that are open to the public. Persons wishing to attend any meeting and/or telephone conference should contact the Secretary of the NQA Standards Committee.

# COMMITTEE ON NUCLEAR QUALITY ASSURANCE

(As of December 19, 2016)

## STANDARDS COMMITTEE ON NUCLEAR QUALITY ASSURANCE

M. V. Mitchell  
T. L. Montgomery  
G. Oliveros  
P. F. Prescott  
E. Renaud  
T. Rezk  
N. Sakamoto  
G. E. Szabatura  
M. H. Tannenbaum  
J. R. Yanek  
T. M. Cauley, *Contributing Member*  
R. Srinivasan, *Contributing Member*  
D. W. Tuttel, *Contributing Member*

## Subcommittee on Interfaces and Administration

R. A. Sacco, *Chair*  
T. E. Dunn, *Vice Chair*  
C. H. Moseley, Jr., *Vice Chair*  
D. Prigel, *Secretary*  
D. Brown  
G. Danielson  
G. J. Reed

C. T. Smith  
M. E. Smith  
J. W. Anderson, *Contributing Member*  
R. G. Burns, *Contributing Member*  
N. M. Burstein, *Contributing Member*

### **Subcommittee on International Activity**

G. Danielson, *Chair*  
R. C. Schrotke, Jr., *Vice Chair*  
C. A. Spletter, *Vice Chair*  
R. Di Salvo, *Secretary*  
D. C. Agarwal  
D. M. Burns

R. Crane  
O. Martinez  
G. Oliveros  
D. Prigel  
C. Sanna  
M. Vann Mitchell

### **Subcommittee on NQA Europe International Working Group**

C. A. Spletter, *Chair*  
V. G. Rosu, *Vice Chair*  
A. Van Heusden, *Vice Chair*  
M. Möhrlein, *Secretary*  
L. Bohl  
B. Foubert  
J. Henrichsmeyer  
D. Koelbl

H. Malkhasyan  
I. Rommerskirchen  
D. Udrea  
J. Wendt  
C. Yilmaz  
A. Zaehner  
R. Zdebor

### **Subcommittee on Program Management Processes**

R. L. Blyth, *Chair*  
K. L. Rhoads, *Vice Chair*  
L. A. Yochim, *Secretary*  
J. G. Adkins  
H. S. O. Al Jaber  
A. Appleton  
D. Arrigo  
R. Augi  
J. E. Bergstrom  
L. M. Cavet  
W. Clover

T. Muraki  
S. K. Sen  
H. V. Sobah  
D. R. Sparkman  
D. Taneja  
P. L. Valdez  
T. R. Verma  
R. W. VonRoble  
C. Wharton  
D. J. Williams

### **Subcommittee on Waste Management**

M. F. Nicol, *Chair*  
R. Wood, *Vice Chair*  
K. A. Morrell, *Secretary*  
G. Appel  
B. Bice III  
A. V. Chermak  
M. C. Eagle

E. L. Jordan  
K. A. McMahon  
R. D. Murray  
C. M. Palay  
D. A. Sayre  
G. F. Suber

### **Subcommittee on Working Group on Interpretation**

A. Appleton  
J. W. McIntyre

R. C. Schrotke, Jr.  
D. Winchester

# INTRODUCTION

This Standard is to be applied to any structure, system, component, activity, or organization that is essential to the safe, reliable, and efficient performance of a nuclear facility and any activities independent of a facility that may affect performance (e.g., transportation of nuclear materials) of those activities. The extent to which this Standard should be applied depends upon the specific type of facility, items, or services involved and the nature, scope, and relative importance of the activity being performed. It is also to be applied to all phases of a nuclear facility life cycle (e.g., siting, design, construction, operation, and decommissioning) and all types of activities (e.g., training, testing, software development or use).

The Standard also applies to activities that could affect the quality of nuclear material applications, structures, systems, and components of nuclear facilities.

Examples of nuclear facilities are those for power generation, spent fuel storage, waste management, fuel reprocessing, nuclear material processing, fuel fabrication, nuclear research, and other related facilities. Examples of activities include siting, designing, procuring, developing or using software, fabricating, constructing, handling, shipping, receiving, storing, cleaning, erecting, installing, inspecting, testing, operating, maintaining, repairing, refueling, modifying, and decommissioning.

This Standard is organized in the following four parts:

(a) Part I contains requirements for developing and implementing a Quality Assurance Program for nuclear facility applications.

(b) Part II contains additional quality assurance requirements for the planning and conduct of specific work activities under a Quality Assurance Program developed in accordance with Part I.

(c) Part III contains guidance for implementing the requirements of Parts I and II.

(d) Part IV contains guidance for application of NQA-1 and comparisons of NQA-1 with other quality requirements.

The arrangement of the requirements in Parts I and II and the guidance in Parts III and IV permit the judicious application of the Standard or portions of the Standard. Applicable requirements of Parts I and II are to be implemented to ensure conformance with NQA-1. The application of this Standard, or portions thereof, shall be invoked by written contracts, policies, procedures, specifications, or other appropriate documents.

This Standard reflects industry experience and current understanding of the quality assurance requirements necessary to achieve safe, reliable, and efficient utilization of nuclear energy and management and processing of radioactive materials. The Standard focuses on the achievement of results, emphasizes the role of the individual and line management in the achievement and sustainment of quality, and fosters the application of these requirements in a manner consistent with the relative importance of the item or activity (i.e., a “graded approach”).

# ASME NQA-1–2017 SUMMARY OF CHANGES

Following approval by the ASME Standards Committee on Nuclear Quality Assurance and ASME, and after public review, ASME NQA-1–2017 was approved by the American National Standards Institute on December 6, 2017.

ASME NQA-1–2017 consists of NQA-1–2015; editorial changes, revisions, and corrections; as well as the following changes identified by a margin note, (17).

| <i>Page</i> | <i>Location</i>                       | <i>Change</i>  |

# PART I

## INTRODUCTION

This Standard reflects industry experience and current understanding of the quality assurance requirements necessary to achieve safe, reliable, and efficient utilization of nuclear energy, and management and processing of radioactive materials. The Standard focuses on the achievement of results, emphasizes the role of the individual and line management in the achievement of quality, and fosters the application of these requirements in a manner consistent with the relative importance of the item or activity.

### 100 PURPOSE

Part I — this Part — establishes requirements for the development and implementation of a Quality Assurance Program (QAP) for nuclear facility applications. It is arranged by Requirements 1 through 18.

Part II contains additional quality assurance requirements for the planning and conduct of specific work activities under a Quality Assurance Program developed in accordance with Part I. It is arranged by Subparts.

Part III contains guidance for implementing the requirements of Parts I and II. It is arranged by Subparts.

Part IV contains guidance for application of NQA-1 and comparisons of NQA-1 with other quality requirements. It is arranged by Subparts.

### 200 APPLICABILITY

This Part — Part I — is to be applied using a graded approach to any structure, system, component, activity, or organization that is essential to the safe, reliable, and efficient performance of a nuclear facility and to any activities independent of a facility that may affect performance (e.g., transportation of nuclear materials) of those activities. It is also to be applied using a graded approach to all phases of a nuclear facility life cycle (e.g., siting, design, construction, operation, and decommissioning) and to all types of activities (e.g., training, testing, software development and use). A Quality Assurance Program developed in accordance with Part I is to be applied when implementing Part II requirements.

### 300 RESPONSIBILITY

The organization invoking this Part shall be responsible for specifying applicable requirements and appropriately relating them to specific items, activities, and

services. The organization implementing this Part and applicable Part II requirements shall be responsible for complying with the specific requirements to achieve quality results in compliance with this Standard.

### 400 TERMS AND DEFINITIONS

The following definitions are provided to assure a uniform understanding of select terms as they are used in this Standard:

*acceptance criteria*: specified limits placed on the performance, results, or other characteristics of an item, process, or service defined in codes, standards, or other requirement documents.

*assessment*: an all-inclusive term that may include review, evaluation, inspection, test, check, surveillance, or audit to determine and document whether items, processes, systems, or services meet specified requirements and perform effectively.

*audit*: a planned and documented activity performed to determine by investigation, examination, or evaluation of objective evidence the adequacy of and compliance with established procedures, instructions, drawings, and other applicable documents, and the effectiveness of implementation. An audit should not be confused with surveillance or inspection activities performed for the sole purpose of process control or product acceptance.

*audit, external*: an audit of those portions of another organization's quality assurance program not under the direct control or within the organizational structure of the auditing organization.

*audit, internal*: an audit of those portions of an organization's quality assurance program retained under its direct control and within its organizational structure.

*audit finding*: a condition adverse to quality identified during an audit requiring follow-up by or for the auditing organization.

*Certificate of Conformance*: a document signed or otherwise authenticated by an authorized individual certifying the degree to which items or services meet specified requirements.

*certification*: the act of determining, verifying, and attesting in writing to the qualifications of personnel, processes, procedures, or items in accordance with specified requirements.
