This MSS Standard Practice was developed under the consensus of the MSS Technical Committee 302, *Marking and Terminology*, and the MSS Coordinating Committee. In addition, this Standard Practice was approved by an ANSI/MSS Consensus Committee and ANSI as a revised American National Standard. The content of this Standard Practice is the resulting efforts of competent and experienced volunteers to provide an effective, clear, and non-exclusive standard that will benefit the industry as a whole. This MSS Standard Practice describes minimal requirements and is intended as a basis for common practice by the manufacturer, the user, and the general public. The existence of an MSS Standard Practice does not in itself preclude the manufacture, sale, or use of products not conforming to the Standard Practice. Mandatory conformance to this Standard Practice is established only by reference in other documents such as a code, specification, sales contract, or public law, as applicable. MSS has no power, nor does it undertake, to enforce or certify compliance with this document. Any certification or other statement of compliance with the requirements of this Standard Practice shall not be attributable to MSS and is solely the responsibility of the certifier or maker of the statement.

“Unless indicated otherwise within this MSS Standard Practice, other standards documents referenced to herein are identified by the date of issue that was applicable to this Standard Practice at the date of approval of this MSS Standard Practice (see Annex C). This Standard Practice shall remain silent on the validity of those other standards of prior or subsequent dates of issue even though applicable provisions may not have changed.”

By publication of this Standard Practice, no position is taken with respect to the validity of any potential claim(s) or of any patent rights in connection therewith. MSS shall not be held responsible for identifying any patent rights. Users are expressly advised that determination of patent rights and the risk of infringement of such rights are entirely their responsibility.

For all MSS Standard Practices, the term “shall” means “must” and “shall not” means “must not”.

In this Standard Practice, all text, notes, annexes, tables, figures, and references are construed to be “normative” and essential to understand the standard’s message. All appendices, footnotes, or other information denoted as “supplemental”, that may be included within this Standard Practice, DO NOT include mandatory or normative requirements.

U.S. customary units in this Standard Practice are the standard; the SI (metric) units are for reference only.

This Standard Practice has been substantively revised from the previous 2013 edition. It is suggested that if the user is interested in knowing what changes have been made, that a direct page by page comparison should be made of this document and that of the previous edition.

Non-toleranced dimensions in this Standard Practice are nominal unless otherwise specified. For the purposes of this Standard Practice, the term “shall” means “must” and “shall not” means “must not”.

Excerpts of this Standard Practice may be quoted with permission. FOREWORD

The original publication of the Standard Marking System was developed by MSS in 1934. It stated the basic rules but was considered to need more details for general use. A second edition was therefore prepared with additional details and examples and was published in 1936.

The third edition, published in 1954, recognized the use of new materials, increased operating temperatures and pressures, and added more examples of markings for regular products.

In 1958, the fourth edition incorporated relatively minor changes and updates; including some additional marking examples.

For the fifth edition, published in 1960, the format was revised to permit the use of nameplates on valve bodies. In addition, this version added requirements for the marking of ductile iron products.

The sixth edition, published in 1964, broadened the scope of this marking standard and revised the examples and sections of the text to reflect changes in piping requirements.

The seventh edition, published in 1978, was substantially revised and re-written to simplify its cross references and to improve readability. This edition incorporated the marking features of pressure-temperature marking designations contained in existing American National Standards involving products and materials. It was also rearranged so that the General Rules were stated in Sections 1 through 11 and amplified in Sections 12 through 18; which gave specific rules and examples of marking requirements relating to various products and materials.

In 1993, the eighth edition incorporated relatively minor changes and updates; including minor revisions required to harmonize this document with then-current MSS Standard Practices.

The tenth edition, published in 2008, included revisions to ASME B16.34 example markings and mandatory MSS conformance markings, in addition to clarifications of other general requirements.

The eleventh edition, published in 2013, included new Annexes for Reference Tables and Marking Requirement Examples, the addition of laser marking techniques and country of origin marking, substantial revision and re-formatting to update the document text and tables, and other revisions to provide clarification as warranted. The 2013 edition was also approved as an American National Standard.

With this twelfth edition, published in 2018, SP-25 observes over 83 years of providing the industry with standardized marking guidance. This twelfth edition includes a new section involving products with rating designations which are constant throughout a specified temperature range; revised requirements involving the marking of a manufacturer's name, trademark, logo, or symbol; revised two material designation subsections involving standard references for marking nameplates and bodies; updated Tables 1 and 2 involving examples of common symbols for metallic/non-metallic materials; updated terminology; included supplemental material designations (e.g., Bismuth, Bismuth-Selenium, and Silicon) for certain non-ferrous flanges, flanged fittings, and flanged unions; updated Annex B to include many revised and new examples; updated and revised Annex C references; and other revisions to provide clarification as warranted. It was also agreed for the next revision to consider markings for MSS SP-44 flanges and ASME B16.36 orifice flanges. This 2018 revised American National Standard edition was ANSI-approved after being substantively revised, reformatted, and approved by MSS, then submitted unpublished to the ANSI balloting and approval process.

ERRATA SHEET FOR MSS SP-25-2018 (*Standard Marking System for Valves, Fittings, Flanges, and Unions*)

March 21, 2023

This “normative” errata correction applies to MSS SP-25-2018 edition (current).

NOTE THE FOLLOWING CORRECTIONS:

- **Page 21, Annex B, *Marking Requirements for B13.7.3***. Correct the data for Material Designation, “F1, ASTM182, B16, or WP1” to read “F1, ASTM A182, or WP1”.
- **Page 23, Annex B, *Marking Requirements for B14.1.2***. Correct the data for Material Designation, “WPB” to read “A105”.
- **Page 23, Annex B, *Marking Requirements for B14.1.3***. Correct the data for Material Designation, “WPB” to read “A182 F1”. No other corrections.

This Errata Sheet is intended for those who obtained the Standard Practice before the March 21, 2023 errata publication date indicated above or otherwise do not already have this information. Please include this Errata Sheet within your existing 2018 edition of the Standard Practice.

Future editions of this Standard Practice will include this corrected information.

PRESIDENT: J. E. Barker – DeZURIK, Inc
VICE PRESIDENTS: D. Bayreuther – Neles Corporation • F. J. Washburn – Rexa, Inc.
TREASURER: P. Heald – Bonney Forge Corp.

TABLE OF CONTENTS

SECTION	GENERAL RULES	
1	SCOPE	1
2	GENERAL MARKING REQUIREMENTS	1
3	MANUFACTURER'S NAME OR TRADEMARK	2
4	RATING DESIGNATION	2
5	MATERIAL DESIGNATION	3
6	HEAT NUMBER	4
7	VALVE TRIM IDENTIFICATION.....	4
8	SIZE DESIGNATION	5
9	IDENTIFICATION OF THREADED ENDS	5
10	RING-JOINT FACING IDENTIFICATION	6
11	PERMISSIBLE OMISSION OF MARKINGS	6
 SPECIFIC RULES 		
12	MARKING REQUIREMENTS FOR FLANGES, FLANGED FITTINGS, AND FLANGED UNIONS	6
13	MARKING REQUIREMENTS FOR THREADED FITTINGS AND UNIONS	7
14	MARKING REQUIREMENTS FOR WELDING AND SOLDER-JOINT FITTINGS AND UNIONS	9
15	MARKING REQUIREMENTS FOR NON-FERROUS VALVES	10
16	MARKING REQUIREMENTS FOR GRAY IRON VALVES	10
17	MARKING REQUIREMENTS FOR DUCTILE IRON VALVES	10
18	MARKING REQUIREMENTS FOR STEEL VALVES	11
 TABLE 		
A1	Examples of Common Symbols for Metallic Materials	13
A2	Examples of Common Symbols for Non-Metallic Materials	13
A3	Size Identification and Equivalency: NPS and DN	14
A4	Examples of Thread Type Symbols	14
A5	ASME B16.1 Rating Designations	14
 ANNEX 		
A	Reference Tables	13
B	Marking Requirement Examples	15
C	Reference Standards and Applicable Dates	33

About MSS

The Manufacturers Standardization Society (MSS) of the Valve and Fittings Industry is a non-profit technical association organized for development and improvement of industry, national and international codes and standards for Valves, Valve Actuators, Valve Modifications, Pipe Fittings, Flanges, Pipe Hangers and Supports, and Associated Seals. Since its establishment in 1924, MSS has been dedicated to developing standards for national and global applications, in cooperation with other standardizing bodies and regulatory authorities. **MSS is an American National Standards Institute (ANSI)-accredited standards developer.**
