#### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

#### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

#### IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

#### IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

#### IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary on electrotechnology, containing more than 22 300 terminological entries in English and French, with equivalent terms in 19 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

---

#### A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

#### A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

#### Recherche de publications IEC -

#### [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

#### Service Clients - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: [sales@iec.ch](mailto:sales@iec.ch).

#### IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 300 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 19 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

## CONTENTS

FOREWORD.....	17
INTRODUCTION.....	19
1 Scope.....	20
1.1 General.....	20
1.2 Specifications .....	21
1.3 Conformance .....	21
2 Normative references .....	21
3 Terms, definitions, abbreviated terms, symbols and conventions .....	24
3.1 Referenced terms and definitions.....	24
3.1.1 ISO/IEC 7498-1 terms.....	24
3.1.2 ISO/IEC 8822 terms.....	25
3.1.3 ISO/IEC 9545 terms.....	25
3.1.4 ISO/IEC 8824-1 terms.....	25
3.2 Additional Type 10 terms and definitions.....	25
3.3 Additional Type 10 terms and definitions for media redundancy .....	33
3.4 Abbreviations and symbols .....	34
3.4.1 General .....	34
3.4.2 Additional Type 10 abbreviations and symbols.....	37
3.4.3 Abbreviations and symbols for services .....	40
3.4.4 Void.....	40
3.5 Conventions.....	40
3.5.1 Overview .....	40
3.5.2 General conventions.....	41
3.5.3 Conventions for class definitions .....	41
3.5.4 Conventions for service definitions .....	42
3.5.5 Conventions used in state machines.....	43
4 Concepts .....	43
5 Data type ASE.....	44
5.1 General.....	44
5.1.1 Overview .....	44
5.1.2 Date and time type specifics .....	44
5.1.3 Transfer of user data .....	44
5.1.4 Data type overview .....	44
5.2 Formal definition of data type objects.....	47
5.2.1 Data type class.....	47
5.3 FAL defined data types .....	49
5.3.1 Fixed length types .....	49
5.3.2 Variable Length types .....	71
5.4 Data type ASE service specification.....	74
6 Communication model for common services .....	74
6.1 Concepts .....	74
6.1.1 General .....	74
6.1.2 Structure of an end station.....	75
6.1.3 Structure of a bridged end station .....	76
6.1.4 Structure of a bridge .....	77
6.1.5 Examples of stations .....	78

6.1.6	Automation system .....	79
6.2	ASE data types .....	80
6.3	ASEs .....	80
6.3.1	Middle Layer ASEs .....	80
6.3.2	Remote procedure call ASE .....	81
6.3.3	Remote service interface ASE .....	90
6.3.4	Domain name system ASE .....	103
6.3.5	Simple network management ASE .....	104
6.3.6	NETCONF ASE .....	107
6.3.7	NETCONF event ASE .....	108
6.3.8	IP suite ASE .....	109
6.3.9	Real time cyclic ASE .....	113
6.3.10	Real time acyclic ASE .....	130
6.3.11	Discovery and basic configuration ASE .....	140
6.3.12	Dynamic host configuration ASE .....	173
6.3.13	IEEE Std 802.1AB ASE .....	175
6.3.14	Media redundancy ASE .....	189
6.3.15	Precision time control ASE .....	196
6.3.16	IEEE Std 802.1AS ASE .....	210
6.3.17	IEEE Std 802.1Q ASE .....	214
6.3.18	IEEE Std 802.1CB ASE .....	230
6.3.19	Fragmentation ASE .....	236
6.3.20	IEEE Std 802.3 ASE .....	238
6.3.21	Void .....	241
6.3.22	Common DL mapping ASE .....	241
6.4	Additional information .....	248
7	Communication model for distributed I/O .....	248
7.1	Concepts .....	248
7.1.1	User requirements .....	248
7.1.2	Features .....	248
7.1.3	Associations .....	249
7.1.4	Device types .....	250
7.1.5	Instance model and device addresses .....	260
7.1.6	Application process .....	260
7.1.7	Application service element .....	268
7.1.8	Application relationship .....	270
7.2	ASE data types .....	270
7.3	ASEs .....	271
7.3.1	AR ASE .....	271
7.3.2	Real Identification ASE .....	409
7.3.3	CIM ASE .....	502
7.3.4	Diagnosis ASE .....	604
7.3.5	PE ASE .....	652
7.3.6	LogBook ASE .....	662
7.3.7	RS ASE .....	665
7.3.8	Time ASE .....	690
7.3.9	NME ASE .....	695
7.4	Application characteristics .....	734
7.4.1	Device Ident Number .....	734

7.4.2	Network topology .....	735
7.5	Summary of FAL services .....	736
7.5.1	IO device .....	736
7.5.2	IO controller .....	737
7.5.3	IO supervisor .....	738
Annex A (informative)	Device instances .....	739
Annex B (informative)	Components of an Ethernet interface .....	741
Annex C (informative)	Scheme of MAC address assignment .....	745
Annex D (informative)	Measurement of the fast startup time .....	746
Annex E (informative)	Dynamic Frame Packing .....	747
Annex F (informative)	Precondition for Diagnosis .....	755
Bibliography	.....	761
Figure 1	– Structure of an automation station .....	74
Figure 2	– Overall view of communication ASEs .....	75
Figure 3	– Structure of an end station .....	76
Figure 4	– Structure of a bridged end station .....	77
Figure 5	– IEEE Std 802 station example 1 (end station and bridge configuration portion) .....	78
Figure 6	– IEEE Std 802 station example 3 .....	79
Figure 7	– IEEE Std 802 station example 4 .....	79
Figure 8	– Automation system example .....	80
Figure 9	– Middle Layer ASEs communication architecture .....	80
Figure 10	– Sequence Chart for reading the EndPointMapper .....	83
Figure 11	– Media redundancy diagnosis dependencies .....	195
Figure 12	– PTCP applications .....	196
Figure 13	– Example of periods at a local port .....	227
Figure 14	– Example of communication between controlling devices and field devices .....	249
Figure 15	– Example of communication between an engineering station and several controlling and field devices .....	250
Figure 16	– Example of communication between field devices and a server station .....	250
Figure 17	– Example of communication between field devices .....	250
Figure 18	– Interfaces, components and ports .....	251
Figure 19	– Multiple interfaces, components and ports .....	252
Figure 20	– Multiple interfaces, one bridge component with one external port .....	253
Figure 21	– Multiple interfaces, multiple bridge components .....	253
Figure 22	– Data Objects and Diagnosis Data Model .....	257
Figure 23	– Example for channel modelling .....	258
Figure 24	– Mapping to device model .....	259
Figure 25	– Identification hierarchy .....	259
Figure 26	– Application Process with application process objects (APOs) .....	261
Figure 27	– Access to a remote APO .....	262
Figure 28	– Access to a remote APO for provider/consumer association .....	263
Figure 29	– Overview of application processes .....	264

Figure 30 – IO device with APs, slots and subslots .....	264
Figure 31 – Example 1 structural units for interfaces and ports within API 0.....	267
Figure 32 – Example 2 structural units for interfaces and ports within API 0.....	267
Figure 33 – FAL ASEs communication architecture.....	268
Figure 34 – Example of one AR with two AREPs.....	270
Figure 35 – Example IO application relationship (one-to-one) .....	273
Figure 36 – Example IO application relationship one-to-many .....	274
Figure 37 – Implicit application relationship .....	275
Figure 38 – State transition diagram DEVSM .....	308
Figure 39 – State transition diagram CTLSM.....	316
Figure 40 – Assignment of Communication Relationship to Application Relationship.....	321
Figure 41 – Overview Communication Relationship Class service interactions .....	324
Figure 42 – Example for an intersection of IO device, slot, and AR .....	387
Figure 43 – Substitute Value.....	417
Figure 44 – State transition diagram RSMSM.....	425
Figure 45 – Ownership handling.....	428
Figure 46 – State transition diagram OWNSM.....	431
Figure 47 – State transition diagram ASSSM .....	431
Figure 48 – State transition diagram PLUGSM.....	443
Figure 49 – State transition diagram PULLSM.....	446
Figure 50 – Location concepts in Asset Management.....	461
Figure 51 – Basic model for isochronous applications .....	476
Figure 52 – General isochronous application model (example CACF == 1) .....	477
Figure 53 – General isochronous application model (example CACF == 2) .....	478
Figure 54 – ASE relations in an IO device operating in isochronous mode for a submodule .....	484
Figure 55 – State transition diagram of ISOM_SYNC .....	486
Figure 56 – State transition diagram ISOM_OUT .....	489
Figure 57 – State transition diagram ISOM_IN .....	494
Figure 59 – CIM overview .....	503
Figure 60 – CIM class principle.....	504
Figure 61 – MRP interconnection .....	588
Figure 62 – State transition diagram SYNC_DIAG.....	599
Figure 63 – Diagnosis Base Model.....	605
Figure 64 – Filtering of diagnosis .....	606
Figure 65 – Filtering hierarchy .....	606
Figure 66 – Severity classification of fault, maintenance and qualified .....	607
Figure 67 – Data Base Model.....	608
Figure 68 – State transition diagram DIAG_DIAG.....	638
Figure 69 – State transition diagram DIAG_MR.....	641
Figure 70 – State transition diagram DIAG_MD.....	645
Figure 71 – State transition diagram DIAG_QUALIFIED .....	649
Figure 72 – Architecture.....	653

Figure 73 – State transition diagram PESM.....	661
Figure 74 – Reporting System components.....	666
Figure 75 – AR / ARSet and Reporting System.....	667
Figure 76 – Max Scan Delay.....	675
Figure 77 – RS Incident window.....	678
Figure 78 – State transition diagram RSOBS.....	683
Figure 79 – State transition diagram RSBUF.....	687
Figure 80 – State transition diagram TimeSM.....	693
Figure 81 – Layers from application to network.....	696
Figure 82 – Assumed application timing model.....	696
Figure 83 – Relations of the IO controller to the Network Management Engine.....	697
Figure 84 – Relations of the IO device to the Network Management Engine.....	698
Figure 85 – Relations of a standalone Network Management Engine.....	698
Figure 86 – Correlation of the Stream Add parameter.....	704
Figure 87 – Interaction of the NME class.....	711
Figure 88 – Interaction of the NCE class.....	714
Figure 89 – Interaction of the TDE class.....	717
Figure 90 – Interaction of the PCE class.....	724
Figure 91 – Interaction of the BNME class.....	727
Figure 92 – Interaction between NME instance and BNME instance.....	727
Figure 93 – Interaction of the NUE class.....	734
Figure 94 – Example of network topology including slower wireless segments.....	735
Figure 95 – Example of media redundancy including wireless segments.....	736
Figure A.1 – Instance model in conjunction with CLRPC.....	739
Figure A.2 – Instance model in conjunction with RSI.....	740
Figure B.1 – Scheme of an Ethernet interface.....	741
Figure B.2 – Scheme of an Ethernet interface with bridging ability.....	742
Figure B.3 – Scheme of an Ethernet interface with optical ports.....	743
Figure B.4 – Scheme of an Ethernet interface with bridging ability using radio communication.....	744
Figure B.5 – Scheme of an Ethernet interface with radio communication.....	744
Figure C.1 – Scheme of MAC address assignment.....	745
Figure D.1 – Measurement of the fast startup time.....	746
Figure E.1 – Frame Layout.....	747
Figure E.2 – Subframe Layout.....	748
Figure E.3 – End to End.....	749
Figure E.4 – Dynamic frame packing.....	749
Figure E.5 – Dynamic frame packing – Truncation of outputs.....	750
Figure E.6 – Dynamic frame packing – Outbound Pack.....	750
Figure E.7 – Dynamic frame packing – Concatenation of inputs.....	751
Figure E.8 – Dynamic frame packing – Inbound Pack.....	752
Figure E.9 – Dynamic frame packing – Distributed watchdog.....	754
Figure E.10 – Interrelation between IO CR and dynamically packed frame.....	754

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**INDUSTRIAL COMMUNICATION NETWORKS –  
FIELDBUS SPECIFICATIONS –****Part 5-10: Application layer service definition –  
Type 10 elements**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 61158-5-10 has been prepared by subcommittee 65C: Industrial networks, of IEC technical committee 65: Industrial-process measurement, control and automation. It is an International Standard.

This fifth edition cancels and replaces the fourth edition published in 2019. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) integration of system redundancy basic functionality;
- b) integration of dynamic reconfiguration basic functionality;
- c) integration of reporting system basic functionality;
- d) integration of asset management basic functionality;

e) integration of media redundancy ring interconnection basic functionality.

The text of this International Standard is based on the following documents:

Draft	Report on voting
65C/1203/FDIS	65C/1244/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs). The main document types developed by IEC are described in greater detail at [www.iec.ch/publications](http://www.iec.ch/publications).

A list of all parts of the IEC 61158 series, published under the general title *Industrial communication networks – Fieldbus specifications*, can be found on the IEC web site.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under [webstore.iec.ch](http://webstore.iec.ch) in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

This part of IEC 61158 is one of a series produced to facilitate the interconnection of automation system components. It is related to other standards in the set as defined by the “three-layer” fieldbus reference model described in IEC 61158-1.

The application service is provided by the application protocol making use of the services available from the data-link or other immediately lower layer. This document defines the application service characteristics that fieldbus applications and/or system management can exploit.

Throughout the set of fieldbus standards, the term “service” refers to the abstract capability provided by one layer of the OSI Basic Reference Model to the layer immediately above. Thus, the application layer service defined in this document is a conceptual architectural service, independent of administrative and implementation divisions.

## **INDUSTRIAL COMMUNICATION NETWORKS – FIELDBUS SPECIFICATIONS –**

### **Part 5-10: Application layer service definition – Type 10 elements**

#### **1 Scope**

##### **1.1 General**

The fieldbus application layer (FAL) provides user programs with a means to access the fieldbus communication environment. In this respect, the FAL can be viewed as a “window between corresponding application programs”.

This part of IEC 61158 provides common elements for basic time-critical and non-time-critical messaging communications between application programs in an automation environment and material specific to Type 10 fieldbus. The term "time-critical" is used to represent the presence of a time-window, within which one or more specified actions are required to be completed with some defined level of certainty. Failure to complete specified actions within the time window risks failure of the applications requesting the actions, with attendant risk to equipment, plant and possibly human life.

This document defines in an abstract way the externally visible service provided by the Type 10 fieldbus application layer in terms of:

- an abstract model for defining application resources (objects) capable of being manipulated by users via the use of the FAL service,
- the primitive actions and events of the service;
- the parameters associated with each primitive action and event, and the form which they take; and
- the interrelationship between these actions and events, and their valid sequences.

The purpose of this document is to define the services provided to:

- the FAL user at the boundary between the user and the application layer of the fieldbus reference model, and
- Systems Management at the boundary between the application layer and Systems Management of the fieldbus reference model.

This document specifies the structure and services of the Type 10 fieldbus application layer, in conformance with the OSI Basic Reference Model (ISO/IEC 7498-1) and the OSI application layer structure (ISO/IEC 9545).

FAL services and protocols are provided by FAL application-entities (AE) contained within the application processes. The FAL AE is composed of a set of object-oriented application service elements (ASEs) and a layer management entity (LME) that manages the AE. The ASEs provide communication services that operate on a set of related application process object (APO) classes. One of the FAL ASEs is a management ASE that provides a common set of services for the management of the instances of FAL classes.
