## RULES FOR CONSTRUCTION OF NUCLEAR FACILITY COMPONENTS

### Appendices

---

ASME Boiler and Pressure Vessel Committee  
on Nuclear Power

The American Society of  
Mechanical Engineers

Two Park Avenue • New York, NY • 10016 USA

Date of Issuance: July 1, 2013

This international code or standard was developed under procedures accredited as meeting the criteria for American National Standards and it is an American National Standard. The Standards Committee that approved the code or standard was balanced to assure that individuals from competent and concerned interests have had an opportunity to participate. The proposed code or standard was made available for public review and comment that provides an opportunity for additional public input from industry, academia, regulatory agencies, and the public-at-large.

ASME does not “approve,” “rate,” or “endorse” any item, construction, proprietary device, or activity.

ASME does not take any position with respect to the validity of any patent rights asserted in connection with any items mentioned in this document, and does not undertake to insure anyone utilizing a standard against liability for infringement of any applicable letters patent, nor assume any such liability. Users of a code or standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, is entirely their own responsibility.

Participation by federal agency representative(s) or person(s) affiliated with industry is not to be interpreted as government or industry endorsement of this code or standard.

ASME accepts responsibility for only those interpretations of this document issued in accordance with the established ASME procedures and policies, which precludes the issuance of interpretations by individuals.

The endnotes in this document (if any) are part of this American National Standard.

ASME collective membership mark

Certification Mark

The above ASME symbol is registered in the U.S. Patent Office.

“ASME” is the trademark of The American Society of Mechanical Engineers.

No part of this document may be reproduced in any form, in an electronic retrieval system or otherwise, without the prior written permission of the publisher.

<b>Mandatory Appendices</b> .....		<b>1</b>
<b>Mandatory Appendix I</b>	<b>Design Fatigue Curves</b> .....	1
<b>Mandatory Appendix II</b>	.....	26
II-1100	Introduction .....	26
II-1200	Permissible Types of Noncyclic Tests and Calculation of Stresses .....	26
II-1300	Test Procedures .....	27
II-1400	Interpretation of Results .....	27
II-1500	Cyclic Tests .....	28
II-1600	Determination of Fatigue Strength Reduction Factors .....	32
II-1700	Experimental Stress Analysis of Openings .....	32
II-1800	Experimental Determination of Stress Indices for Piping .....	33
II-1900	Experimental Determination of Flexibility Factors .....	33
II-2100	Introduction .....	34
II-2200	Definitions .....	34
II-2300	Test Procedure .....	34
II-2400	Stress Intensification Factor .....	35
II-2500	Variations in Materials and Geometry .....	36
II-2600	Test Report .....	36
<b>Mandatory Appendix III</b>	<b>Basis for Establishing Design Stress Intensity Values and Allowable Stress Values</b> .....	38
III-1100	Derivation of Values and Their Tabular Organization .....	38
III-2100	Mechanical Property Criteria .....	39
III-2200	Fatigue Strength Criteria for all Materials .....	39
<b>Mandatory Appendix IV</b>	<b>Approval of New Materials Under the ASME Boiler and Pressure Vessel Code</b> .....	40
<b>Mandatory Appendix V</b>	<b>Certificate Holder's Data Report Forms, Instructions, and Application Forms for Certificates of Authorization for Use of Certification Mark</b> .....	41
<b>Mandatory Appendix VI</b>	.....	72
VI-1100	Acceptance Standards for Radiographically Determined Rounded Indications in Welds .....	72

<b>Mandatory Appendix XI</b>	<b>Rules for Bolted Flange Connections for Class 2 and 3 Components and Class MC Vessels</b> .....	81
XI-1100	General Requirements .....	81
XI-2100	Material Requirements .....	83
XI-3100	General Requirements .....	84
XI-3200	Class RF Flange Design .....	88
<b>Mandatory Appendix XII</b>	.....	100
XII-1100	Considerations .....	100
<b>Mandatory Appendix XIII</b>	.....	102
XIII-1100	General Requirements .....	102
XIII-2100	Methods of Evaluation .....	112
<b>Mandatory Appendix XIV</b>	.....	115
XIV-1100	Introduction .....	115
XIV-1200	Analysis for Cyclic Service of Vessels .....	115
XIV-1300	Analysis for Cyclic Service of Bolts .....	117
XIV-1400	Analysis for Thermal Stress Ratchet .....	117
<b>Mandatory Appendix XVIII</b>	.....	119
XVIII-1100	Procedure for Conversion .....	119
<b>Mandatory Appendix XIX</b>	.....	127
XIX-1100	General Requirements .....	127
XIX-1200	Design Procedure .....	128
<b>Mandatory Appendix XX</b>	.....	130
<b>Mandatory Appendix XXI</b>	.....	131
XXI-1100	Introduction .....	131
<b>Mandatory Appendix XXII</b>	.....	132
XXII-1100	Introduction .....	132
XXII-1200	Nomenclature .....	132
XXII-1300	Design Pressure .....	133
<b>Mandatory Appendix XXIII</b>	.....	136
XXIII-1100	Scope .....	136
XXIII-1200	Qualifications .....	136
XXIII-1300	Duties .....	137
Guide A	Nonmandatory Sample Statements .....	139
Guide B	Nonmandatory Guidelines For Establishing ASME Code Knowledge .....	142
Guide C	Nonmandatory Guidelines for Demonstrating PE Qualifications .....	145
<b>Mandatory Appendix XXIV</b>	<b>Standard Units for Use in Equations</b> .....	146
<b>Mandatory Appendix XXV</b>	<b>ASME-Provided Material Stress-Strain Data</b> .....	147
XXV-1100	Stress-Strain Data .....	147
<b>Nonmandatory Appendices</b> .....	.....	148
<b>Nonmandatory Appendix A</b>	.....	148
A-1100	Introduction .....	148
A-2100	Introduction .....	149
A-2200	Stress Intensities, Displacements, Bending Moments, and Limiting Values .....	150
A-3100	Introduction .....	152
A-3200	Stress Intensities, Bending Analysis, Displacements, and Edge Loads .....	153
A-4100	Introduction .....	158
A-5100	Introduction .....	160
A-5200	Loads, Displacements, and Geometry Constants .....	160
A-6100	Introduction .....	164
A-6200	Method of and Procedure for Discontinuity Analysis .....	164

A-7100	Introduction .....	171
A-8100	Introduction .....	172
A-9100	Introduction .....	185
A-9200	Interaction Equations .....	185
A-9300	Allowable Loads and Stresses .....	186
A-9400	New Interaction Equations .....	187
A-9500	Determination of Allowable Bending Strength of Beams by the Apparent Stress Method .....	187
<b>Nonmandatory Appendix B</b>	<b>Owner's Design Specifications .....</b>	<b>196</b>
B-1100	Introduction .....	196
B-1200	Scope of Certified Design Specification .....	196
B-2100	Certified Design Specification Requirements .....	197
B-2200	Operability .....	201
B-2300	Regulatory Requirements .....	201
B-3100	Certified Design Specification Requirements .....	202
B-4100	Certified Design Specification Requirements .....	203
B-4200	Operability Requirements for Pumps .....	203
B-4300	Regulatory Requirements .....	203
B-5100	Certified Design Specification Requirements .....	204
B-5200	Operability Requirements for Valves .....	204
B-5300	Regulatory Requirements .....	205
B-6100	Certified Design Specification Requirements .....	206
B-7100	Certified Design Specification Requirements .....	207
B-8100	Certified Design Specification Requirements .....	208
B-8300	Regulatory Requirements .....	208
B-9100	Certified Design Specification Requirements .....	209
B-10100	Certified Design Specification Requirements .....	211
<b>Nonmandatory Appendix C</b>	.....	212
C-1100	Introduction .....	212
C-1200	Thermal Analysis .....	213
C-1300	Structural Analysis .....	213
C-1400	Fatigue Evaluation .....	214
<b>Nonmandatory Appendix D</b>	.....	215
D-1100	Introduction .....	215
D-1200	Ferrous Materials .....	215
<b>Nonmandatory Appendix E</b>	.....	218
E-1100	Introduction .....	218
E-1200	Design Cross-Sectional Area .....	218
<b>Nonmandatory Appendix F</b>	.....	224
F-1100	Introduction .....	224
F-1200	Intent of Level D Service Limits .....	224
F-1300	Level D Service Limits and Design Rules .....	224
F-1400	Vessels .....	232
<b>Nonmandatory Appendix G</b>	<b>Fracture Toughness Criteria for Protection Against Failure .....</b>	<b>233</b>
G-2100	General Requirements .....	234
G-2200	Level A and Level B Service Limits .....	234
G-2300	Level C and Level D Service Limits .....	240
G-2400	Hydrostatic Test Temperature .....	240
G-3100	General Requirements .....	242
G-4100	General Requirements .....	243

<b>Nonmandatory Appendix L</b>	<b>Class FF Flange Design for Class 2 and 3 Components and Class MC Vessels</b>	244
L-1100	General Requirements	244
L-2100	Material Requirements	245
L-3100	General Requirements	246
L-3200	Design of Flanges and Bolting	250
<b>Nonmandatory Appendix M</b>		259
M-1100	Introduction	259
M-1200	Welding Procedure Specifications	259
M-1300	Welding Performance Qualification and Assignment	260
M-1400	Control of Welding	260
M-1500	Nondestructive Examination of Welds	260
M-1600	Postweld Heat Treatment	260
M-1700	Examination and Dimensional Inspection	260
<b>Nonmandatory Appendix N</b>		261
N-1100	Introduction and Scope	261
N-1200	Seismic Analysis	262
N-1300	Flow-Induced Vibration of Tubes and Tube Banks	289
N-1400	Dynamics of Coupled Fluid-Shells	306
N-1500	Fluid Transient Dynamics	315
N-1600	Miscellaneous Impulsive and Impactive Loads	315
N-1700	Combined Responses	315
<b>Nonmandatory Appendix O</b>		326
O-1100	Scope and Definitions	326
O-1200	Method of and Procedure for Load Computation	327
O-1300	Stress Evaluation Open System	328
O-1400	Closed Discharge Systems — Open Discharge Systems with Long Discharge Pipes — Systems with Slug Flow	328
O-1500	Design Considerations	329
<b>Nonmandatory Appendix P</b>		330
P-1100	Introduction	330
P-1200	General Required Information	330
P-1300	Information Required Under Specific Circumstances	330
P-1400	Execution	331
<b>Nonmandatory Appendix Q</b>		332
Q-1100	Introduction	332
<b>Nonmandatory Appendix R</b>		339
R-1100	Introduction	339
R-1200	Determination of Permissible Lowest Service Metal Temperature	339
<b>Nonmandatory Appendix S</b>		341
S-1100	Introduction	341
S-1200	Scope	341
S-1300	Design Requirements	341
S-1400	Responsibility	341
S-1500	Operating Loads	341
S-1600	Shaft Failure Modes	342
S-2100	Critical Speeds	344
S-2200	Maximum Torsional Load	344
S-2300	Shaft Evaluation	344
S-2400	Other Considerations	344

<b>Nonmandatory Appendix T</b>	.....	346
T-1100	Introduction .....	346
T-1200	Total Tolerances .....	347
<b>Nonmandatory Appendix U</b>	.....	353
U-1100	Introduction .....	353
U-1200	General Requirements .....	353
U-1300	Materials .....	353
U-1400	Fabrication Requirements .....	366
<b>Nonmandatory Appendix W</b>	.....	369
W-1100	Introduction .....	369
W-1200	Section XI and Plex Applications .....	369
W-2100	Stress Corrosion Cracking .....	370
W-2200	General Corrosion and Wastage .....	372
W-2300	Pitting Corrosion .....	374
W-2400	Crevice Corrosion and Denting .....	375
W-2500	Intergranular Corrosion Attack .....	376
W-2600	Microbiologically-Induced Corrosion and Fouling .....	378
W-2700	Corrosion Fatigue and Crack Growth .....	380
W-2800	Flow Accelerated Corrosion .....	381
W-2900	Erosion and Erosion-Corrosion .....	383
W-3100	Irradiation-Assisted Stress Corrosion Cracking (IASCC) .....	385
W-3200	Thermal Aging Embrittlement .....	386
W-3300	Radiation Embrittlement .....	387
W-3400	Hydrogen Damage Embrittlement and Delayed Cracking .....	387
W-4100	Fretting and Wear .....	390
W-4200	Thermal Fatigue .....	391
W-4300	Dynamic Loading — Vibration, Water Hammer and Unstable Fluid Flow .....	391
W-4400	Creep .....	391
<b>Nonmandatory Appendix Y</b>	.....	394
Y-1100	Introduction .....	394
Y-2100	Introduction .....	395
Y-2200	Limitations to Applicability .....	395
Y-2300	Nomenclature and Definitions (see <a href="#">Figure Y-2300-1</a> ) .....	395

## LIST OF SECTIONS

### SECTIONS

- I Rules for Construction of Power Boilers
  
- II Materials
  - Part A — Ferrous Material Specifications
  - Part B — Nonferrous Material Specifications
  - Part C — Specifications for Welding Rods, Electrodes, and Filler Metals
  - Part D — Properties (Customary)
  - Part D — Properties (Metric)
  
- III Rules for Construction of Nuclear Facility Components
  - Subsection NCA — General Requirements for Division 1 and Division 2
  - Appendices
  - Division 1
    - Subsection NB — Class 1 Components
    - Subsection NC — Class 2 Components
    - Subsection ND — Class 3 Components
    - Subsection NE — Class MC Components
    - Subsection NF — Supports
    - Subsection NG — Core Support Structures
    - Subsection NH — Class 1 Components in Elevated Temperature Service
  - Division 2 — Code for Concrete Containments
  - Division 3 — Containments for Transportation and Storage of Spent Nuclear Fuel and High Level Radioactive Material and Waste
  - Division 5 — High Temperature Reactors
  
- IV Rules for Construction of Heating Boilers
  
- V Nondestructive Examination
  
- VI Recommended Rules for the Care and Operation of Heating Boilers
  
- VII Recommended Guidelines for the Care of Power Boilers
  
- VIII Rules for Construction of Pressure Vessels
  - Division 1
  - Division 2 — Alternative Rules
  - Division 3 — Alternative Rules for Construction of High Pressure Vessels
  
- IX Welding, Brazing, and Fusing Qualifications
  
- X Fiber-Reinforced Plastic Pressure Vessels
  
- XI Rules for Inservice Inspection of Nuclear Power Plant Components
  
- XII Rules for Construction and Continued Service of Transport Tanks

## **INTERPRETATIONS**

ASME issues written replies to inquiries concerning interpretation of technical aspects of the Code.

Interpretations of the Code are posted in January and July at <http://cstools.asme.org/interpretations.cfm>. Any Interpretations issued during the previous two calendar years are included with the publication of the applicable Section of the Code. Interpretations of Section III, Divisions 1 and 2 and Section III Appendices are included with Subsection NCA.

## **CODE CASES**

The Boiler and Pressure Vessel Code committees meet regularly to consider proposed additions and revisions to the Code and to formulate Cases to clarify the intent of existing requirements or provide, when the need is urgent, rules for materials or constructions not covered by existing Code rules. Those Cases that have been adopted will appear in the appropriate 2013 Code Cases book: "Boilers and Pressure Vessels" or "Nuclear Components." Supplements will be sent automatically to the purchasers of the Code Cases books up to the publication of the 2015 Code.

## FOREWORD

(This Foreword is provided as an aid to the user and is not part of the rules of this Code.)

In 1911, The American Society of Mechanical Engineers established the Boiler and Pressure Vessel Committee to formulate standard rules for the construction of steam boilers and other pressure vessels. In 2009, the Boiler and Pressure Vessel Committee was superseded by the following committees:

- (a) Committee on Power Boilers (I)
- (b) Committee on Materials (II)
- (c) Committee on Construction of Nuclear Facility Components (III)
- (d) Committee on Heating Boilers (IV)
- (e) Committee on Nondestructive Examination (V)
- (f) Committee on Pressure Vessels (VIII)
- (g) Committee on Welding, Brazing, and Fusing (IX)
- (h) Committee on Fiber-Reinforced Plastic Pressure Vessels (X)
- (i) Committee on Nuclear Inservice Inspection (XI)
- (j) Committee on Transport Tanks (XII)

Where reference is made to “the Committee” in this Foreword, each of these committees is included individually and collectively.

The Committee's function is to establish rules of safety relating only to pressure integrity, which govern the construction\* of boilers, pressure vessels, transport tanks, and nuclear components, and the inservice inspection of nuclear components and transport tanks. The Committee also interprets these rules when questions arise regarding their intent. This Code does not address other safety issues relating to the construction of boilers, pressure vessels, transport tanks, or nuclear components, or the inservice inspection of nuclear components or transport tanks. Users of the Code should refer to the pertinent codes, standards, laws, regulations, or other relevant documents for safety issues other than those relating to pressure integrity. Except for Sections XI and XII, and with a few other exceptions, the rules do not, of practical necessity, reflect the likelihood and consequences of deterioration in service related to specific service fluids or external operating environments. In formulating the rules, the Committee considers the needs of users, manufacturers, and inspectors of pressure vessels. The objective of the rules is to afford reasonably certain protection of life and property, and to provide a margin for deterioration in service to give a reasonably long, safe period of usefulness. Advancements in design and materials and evidence of experience have been recognized.

This Code contains mandatory requirements, specific prohibitions, and nonmandatory guidance for construction activities and inservice inspection and testing activities. The Code does not address all aspects of these activities and those aspects that are not specifically addressed should not be considered prohibited. The Code is not a handbook and cannot replace education, experience, and the use of engineering judgment. The phrase *engineering judgement* refers to technical judgments made by knowledgeable engineers experienced in the application of the Code. Engineering judgments must be consistent with Code philosophy, and such judgments must never be used to overrule mandatory requirements or specific prohibitions of the Code.

The Committee recognizes that tools and techniques used for design and analysis change as technology progresses and expects engineers to use good judgment in the application of these tools. The designer is responsible for complying with Code rules and demonstrating compliance with Code equations when such equations are mandatory. The Code neither requires nor prohibits the use of computers for the design or analysis of components constructed to the requirements of the Code. However, designers and engineers using computer programs for design or analysis are cautioned that they are responsible for all technical assumptions inherent in the programs they use and the application of these programs to their design.

---

\* *Construction*, as used in this Foreword, is an all-inclusive term comprising materials, design, fabrication, examination, inspection, testing, certification, and pressure relief.

The rules established by the Committee are not to be interpreted as approving, recommending, or endorsing any proprietary or specific design, or as limiting in any way the manufacturer's freedom to choose any method of design or any form of construction that conforms to the Code rules.

The Committee meets regularly to consider revisions of the rules, new rules as dictated by technological development, Code Cases, and requests for interpretations. Only the Committee has the authority to provide official interpretations of this Code. Requests for revisions, new rules, Code Cases, or interpretations shall be addressed to the Secretary in writing and shall give full particulars in order to receive consideration and action (see Submittal of Technical Inquiries to the Boiler and Pressure Vessel Standards Committees). Proposed revisions to the Code resulting from inquiries will be presented to the Committee for appropriate action. The action of the Committee becomes effective only after confirmation by ballot of the Committee and approval by ASME. Proposed revisions to the Code approved by the Committee are submitted to the American National Standards Institute (ANSI) and published at <http://cstools.asme.org/csconnect/public/index.cfm?PublicReview=Revisions> to invite comments from all interested persons. After public review and final approval by ASME, revisions are published at regular intervals in Editions of the Code.

The Committee does not rule on whether a component shall or shall not be constructed to the provisions of the Code. The scope of each Section has been established to identify the components and parameters considered by the Committee in formulating the Code rules.

Questions or issues regarding compliance of a specific component with the Code rules are to be directed to the ASME Certificate Holder (Manufacturer). Inquiries concerning the interpretation of the Code are to be directed to the Committee. ASME is to be notified should questions arise concerning improper use of an ASME Certification Mark.

When required by context in this Section, the singular shall be interpreted as the plural, and vice versa, and the feminine, masculine, or neuter gender shall be treated as such other gender as appropriate.

## **STATEMENT OF POLICY ON THE USE OF THE CERTIFICATION MARK AND CODE AUTHORIZATION IN ADVERTISING**

ASME has established procedures to authorize qualified organizations to perform various activities in accordance with the requirements of the ASME Boiler and Pressure Vessel Code. It is the aim of the Society to provide recognition of organizations so authorized. An organization holding authorization to perform various activities in accordance with the requirements of the Code may state this capability in its advertising literature.

Organizations that are authorized to use the Certification Mark for marking items or constructions that have been constructed and inspected in compliance with the ASME Boiler and Pressure Vessel Code are issued Certificates of Authorization. It is the aim of the Society to maintain the standing of the Certification Mark for the benefit of the users, the enforcement jurisdictions, and the holders of the Certification Mark who comply with all requirements.

Based on these objectives, the following policy has been established on the usage in advertising of facsimiles of the Certification Mark, Certificates of Authorization, and reference to Code construction. The American Society of Mechanical Engineers does not “approve,” “certify,” “rate,” or “endorse” any item, construction, or activity and there shall be no statements or implications that might so indicate. An organization holding the Certification Mark and/or a Certificate of Authorization may state in advertising literature that items, constructions, or activities “are built (produced or performed) or activities conducted in accordance with the requirements of the ASME Boiler and Pressure Vessel Code,” or “meet the requirements of the ASME Boiler and Pressure Vessel Code.” An ASME corporate logo shall not be used by any organization other than ASME.

The Certification Mark shall be used only for stamping and nameplates as specifically provided in the Code. However, facsimiles may be used for the purpose of fostering the use of such construction. Such usage may be by an association or a society, or by a holder of the Certification Mark who may also use the facsimile in advertising to show that clearly specified items will carry the Certification Mark. General usage is permitted only when all of a manufacturer’s items are constructed under the rules.

## **STATEMENT OF POLICY ON THE USE OF ASME MARKING TO IDENTIFY MANUFACTURED ITEMS**

The ASME Boiler and Pressure Vessel Code provides rules for the construction of boilers, pressure vessels, and nuclear components. This includes requirements for materials, design, fabrication, examination, inspection, and stamping. Items constructed in accordance with all of the applicable rules of the Code are identified with the official Certification Mark described in the governing Section of the Code.

Markings such as “ASME,” “ASME Standard,” or any other marking including “ASME” or the Certification Mark shall not be used on any item that is not constructed in accordance with all of the applicable requirements of the Code.

Items shall not be described on ASME Data Report Forms nor on similar forms referring to ASME that tend to imply that all Code requirements have been met when, in fact, they have not been. Data Report Forms covering items not fully complying with ASME requirements should not refer to ASME or they should clearly identify all exceptions to the ASME requirements.

# (13) SUBMITTAL OF TECHNICAL INQUIRIES TO THE BOILER AND PRESSURE VESSEL STANDARDS COMMITTEES

## 1 INTRODUCTION

(a) The following information provides guidance to Code users for submitting technical inquiries to the committees. See Guideline on the Approval of New Materials Under the ASME Boiler and Pressure Vessel Code in Section II, Parts C and D for additional requirements for requests involving adding new materials to the Code. Technical inquiries include requests for revisions or additions to the Code rules, requests for Code Cases, and requests for Code Interpretations, as described below.

(1) *Code Revisions.* Code revisions are considered to accommodate technological developments, address administrative requirements, incorporate Code Cases, or to clarify Code intent.

(2) *Code Cases.* Code Cases represent alternatives or additions to existing Code rules. Code Cases are written as a question and reply, and are usually intended to be incorporated into the Code at a later date. When used, Code Cases prescribe mandatory requirements in the same sense as the text of the Code. However, users are cautioned that not all jurisdictions or owners automatically accept Code Cases. The most common applications for Code Cases are:

(-a) to permit early implementation of an approved Code revision based on an urgent need

(-b) to permit the use of a new material for Code construction

(-c) to gain experience with new materials or alternative rules prior to incorporation directly into the Code

(3) *Code Interpretations.* Code Interpretations provide clarification of the meaning of existing rules in the Code, and are also presented in question and reply format. Interpretations do not introduce new requirements. In cases where existing Code text does not fully convey the meaning that was intended, and revision of the rules is required to support an interpretation, an Intent Interpretation will be issued and the Code will be revised.

(b) The Code rules, Code Cases, and Code Interpretations established by the committees are not to be considered as approving, recommending, certifying, or endorsing any proprietary or specific design, or as limiting in any way the freedom of manufacturers, constructors, or owners to choose any method of design or any form of construction that conforms to the Code rules.

(c) Inquiries that do not comply with these provisions or that do not provide sufficient information for a committee's full understanding may result in the request being returned to the inquirer with no action.

## 2 INQUIRY FORMAT

Submittals to a committee shall include:

(a) *Purpose.* Specify one of the following:

(1) revision of present Code rules

(2) new or additional Code rules

(3) Code Case

(4) Code Interpretation

(b) *Background.* Provide the information needed for the committee's understanding of the inquiry, being sure to include reference to the applicable Code Section, Division, Edition, Addenda (if applicable), paragraphs, figures, and tables. Preferably, provide a copy of the specific referenced portions of the Code.

(c) *Presentations.* The inquirer may desire or be asked to attend a meeting of the committee to make a formal presentation or to answer questions from the committee members with regard to the inquiry. Attendance at a committee meeting shall be at the expense of the inquirer. The inquirer's attendance or lack of attendance at a meeting shall not be a basis for acceptance or rejection of the inquiry by the committee.
