## Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

## Foreword

This Technical Report (TR) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under <http://webapp.etsi.org/key/queryform.asp>.

---

## Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

D.7.3.1	TRP.....	85
D.7.3.2	TRS.....	85
D.7.4	Calibration measurement.....	86
D.8	Measurement uncertainty and corrections in 2G system measurements.....	86
<b>Annex E (informative): Alternative measurement technologies: reverberation chamber method .....87</b>		
E.1	Reverberation chamber constraints .....	87
E.1.1	Chamber size.....	87
E.1.2	Mode-stirring facilities .....	87
E.1.3	Loading of chamber with lossy objects.....	88
E.1.4	Polarization imbalance and receiving antennas.....	88
E.1.5	Shielding effectiveness.....	89
E.2	Reverberation chamber method.....	89
E.2.1	Measurement procedure – transmitter performance.....	89
E.2.2	Measurement procedure – receiver performance .....	89
E.3	Calibration of reverberation chamber.....	90
E.3.1	Measurement of S-parameters through the chamber for a complete stirring sequence .....	91
E.3.2	Calculation of the chamber reference transfer function.....	92
E.3.3	Cable calibration .....	92
E.4	Estimation of measurement uncertainty .....	93
<b>Annex F (informative): Anechoic chamber specifications and validation method .....94</b>		
F.1	Shielded anechoic chamber specifications .....	94
F.2	Quiet Zone reflectivity level validation.....	94
F.2.1	Description of a practical method for Quiet Zone characterization.....	94
<b>Annex G (informative): Reverberation chamber specifications and validation method.....97</b>		
G.1	Shielded reverberation chamber specifications.....	97
G.2	Reverberation chamber statistical ripple and repeatability validation.....	97
<b>Annex H (informative): Dielectric Property Measurements of Hand Phantoms.....99</b>		
H.1	Open-ended Coaxial Probe (OCP) Method.....	99
<b>Annex I (informative): Change history .....101</b>		
	History .....	102

---

# Foreword

This Technical Specification has been produced by the 3<sup>rd</sup> Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

---

# 1 Scope

The present document describes the methods to be used in order to assess the radio performances of the 3G user equipment/mobile stations (UE/MS) in active mode in both the up- and the downlink. The test procedure is based on the test method developed as a result of COST 273 Sub-Working Group (SWG) 2.2 members' contributions and the first draft was published in [1]. Background work has also been made in the former COST259 project [2] [3].

---

# 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.
