Prosthetics and orthotics — Vocabulary

Part 1: General terms for external limb prostheses and external orthoses

National foreword

This British Standard is the UK implementation of ISO 8549-1:2020. It supersedes BS 7313-1.1:1990, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee CH/168, Prosthetics and orthotics.

A list of organizations represented on this committee can be obtained on request to its committee manager.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 168 *Prosthetics and orthotics*.

This second edition cancels and replaces the first edition (ISO 8549-1:1989), which has been technically revised.

The main changes compared to the previous edition are as follows:

- definitions of foot orthotics, head orthosis and soft orthosis have been added to the list of areas of orthotic practise (see [3.1](#));
- a definition of the head has been added to the list of anatomical terms (see [3.2](#));
- definitions of foot orthotist, hand therapist and the clinic team have been added to the list of personnel involved in the prosthetic and orthotic supply process (see [3.3](#));
- the list definitions of anatomical terms (see [3.2](#)) has been reduced to include only those essential for the definitions in [3.1](#) and the list of definitions of the stages of the prosthetic/orthotic supply process (see [3.3](#)) has been removed as being outdated.

A list of all parts in the ISO 8549 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

Prior to the publication of the first edition of this document in 1989, no internationally accepted terminology to describe the various areas of prosthetic and orthotic practice, the categories of prosthetic and orthotic devices and the personnel involved in the supply of these devices existed. Consequently, the members of the clinic teams in different countries and working in different facilities had developed their own terminology to meet their own needs.

The terms and definitions provided in this document reflect the changes in the field of prosthetics and orthotics since the publication of the first edition of this document.

They will allow practitioners to describe, in a standardized manner, the devices they supply and the personnel involved in the supply process.

This document will also be of value to epidemiologists and national health officials.

Users of this document are also advised of the WHO International Classification of Impairments, Disabilities and Handicaps^[5].

Prosthetics and orthotics — Vocabulary —

Part 1:

General terms for external limb prostheses and external orthoses

1 Scope

This document defines general terms used to describe external limb prostheses and orthoses, and the personnel involved in the practice of prosthetics and orthotics.

NOTE 1 The complete range of levels of limb amputation are listed and defined in ISO 8549-2. The complete range of classes of orthoses are listed and defined in ISO 8549-3.

This document does not apply to breast, ocular or other external prostheses used to replace other parts of the human body, nor to dental prostheses or orthoses.

NOTE 2 For the purposes of this document, the abbreviated term 'prosthetics' and its derivatives only apply to external limb prosthetics. The abbreviated term 'orthotics' and its derivatives only apply to external orthotics.

2 Normative references

There are no normative references in this document.

3 Terms and definitions

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

NOTE An alphabetical index of terms is provided in [Annex A](#).

3.1 Prostheses and orthoses

3.1.1

prosthesis

prosthetic device

externally applied device used to replace wholly, or in part, an absent or deficient limb segment

Note 1 to entry: It includes any such device attached to a component within the limb for structural or functional purposes, e.g. bone anchored prosthetic devices.

3.1.2

orthosis

orthotic device

externally applied device used to compensate for impairments of the structure and function of the neuro-muscular and skeletal systems

3.1.3

prosthetics

science and art involved in treating persons by the use of *prostheses* ([3.1.1](#))
