## Disclaimers<sup>1</sup>

NSF International (NSF), in performing its functions in accordance with its objectives, does not assume or undertake to discharge any responsibility of the manufacturer or any other party. The opinions and findings of NSF represent its professional judgment. NSF shall not be responsible to anyone for the use of or reliance upon this standard by anyone. NSF shall not incur any obligation or liability for damages, including consequential damages, arising out of or in connection with the use, interpretation of, or reliance upon this standard. It is the responsibility of the user of this standard to judge the suitability of the ANS for the user's purpose.

Participation in NSF standards development activities by regulatory agency representatives (federal, state, or local) shall not constitute their agency's endorsement of NSF or any of its Standards.

Preference is given to the use of performance criteria measurable by examination or testing in NSF standards development when such performance criteria may reasonably be used in lieu of design, materials, or construction criteria.

A dual-unit technical standard may use both non-SI (English System of Measurement) and SI units of measure (SI is the International System of Units, commonly known as the metric system). Unless stated otherwise, whichever system provided in the primary position is the official and normative unit value. Units may be provided in parentheses immediately following the primary units when required for clarity or informational purposes. As such, these values stated are not interchangeable, should be regarded separately, and used independently. Interchanging values from both unit systems may result in errors.

The illustrations, if provided, are intended to assist in understanding their adjacent standard requirements. However, the illustrations may not include all requirements for a specific product or unit, nor do they show the only method of fabricating such arrangements. Such partial drawings shall not be used to justify improper or incomplete design and construction.

At the time of this publication, examples of programs and processes were provided for general guidance. This information is given for the convenience of users of this standard and does not constitute an endorsement by NSF International. Equivalent programs and processes may be used.

Unless otherwise referenced, the annexes are not considered an integral part of NSF standards. The annexes are provided as general guidelines to the manufacturer, regulatory agency, user, or certifying organization.

## **Foreword<sup>2</sup>**

The purpose of NSF/ANSI 455-4 is to serve as an evaluation tool for analyzing good manufacturing practices (GMP) for over-the-counter (OTC) drug manufacturers. Certification to this standard serves as a communication tool between manufacturers of OTC drugs, regulators, retailers, and consumers.

This edition of the standard contains the following revisions:

### **Issue 32**

This revision updates references throughout Section 4.

### **Issue 37**

This revision updates Section 5.8 to redefine the certificate expiration and recertification audit timeline to ensure there are not gaps in certification for certified facilities. It also clarifies the intent and removes redundancy in verbiage.

### **Issue 38**

This revision updates Sections 5.2.a and 5.3.2 to reference Section 2: Normative references rather than list them out. It also removes a link to the documents from Section 5.3.2 since they are available on the FDA website.

### **Issue 41**

This revision clarifies the intent of the requirements by adding new language and removing unclear and unnecessary verbiage in Sections 5.7.1 through 5.7.3.

### **Issue 42**

This revision provides structure around virtual audits in Sections 5.2 through 5.5 and corrects an error which lists “type” instead of “technology” in Section 5.4.3.

This standard was developed by the NSF Joint Committee on GMP for Over-the-Counter Drugs using the consensus process described by the American National Standards Institute.

This standard and the accompanying text are intended for voluntary use by certifying organizations, regulatory agencies, and/or manufacturers as a basis of providing assurances that adequate health protection exists for covered products.

Suggestions for improvement of this standard are welcome. This standard is maintained on a continuous maintenance schedule and can be opened for comment at any time. Comments should be sent to Chair, Joint Committee on Good Manufacturing Practices for Over-the-Counter Drugs at [standards@nsf.org](mailto:standards@nsf.org), or c/o NSF International, Standards Department, P.O. Box 130140, Ann Arbor, Michigan 48113-0140, U.S.A.

## Good Manufacturing Practices for Over-the-Counter Drugs

### 1 General

#### 1.1 Purpose

The principles outlined in this standard provide a comprehensive basis for the quality management system used in the manufacture of over-the-counter (OTC) drugs. Implementation of these principles shall result in the achievement of three main objectives:

- **achieve OTC drug realization:** the organization shall implement and maintain a system that delivers OTC drugs with the quality attributes necessary to meet the requirements and expectations of customers, retailers, and regulatory authorities;
- **establish and maintain a state of control:** the organization shall ensure the manufacture and supply of OTC drugs is in accordance with this standard, thus providing customers with some assurance of continued suitability and reliability of supply; and
- **facilitate continual improvement:** the organization shall collect objective evidence to continually develop and enhance the application of these quality management system principles to further assure OTC drug consistency.

#### 1.2 Scope

This standard is intended to define a standardized approach for auditing to determine the level of compliance of OTC drug products to 21 C.F.R. Part 210 *Current Good Manufacturing Practice in Manufacturing, Processing, Packing, or Holding of Drugs; General* and 21 C.F.R. Part 211 *Current Good Manufacturing Practice for Finished Pharmaceuticals*, International Council for Harmonisation of Technical Requirements for Pharmaceutical for Human Use (ICH) Quality Guidelines, 1, 7 and 10, as well as incorporating additional retailer requirements. It refers to the requirements for good manufacturing practices (GMPs) applicable to all OTC drugs. It will assist in the determination of adequate facilities and controls for OTC drug manufacture with sufficient quality to ensure suitability for intended use.

### 2 Normative references

The following documents contain requirements that, by reference in this text, constitute requirements of this standard. At the time of publication, the indicated editions were valid. All of the documents are subject to revision and parties are encouraged to investigate the possibility of applying the recent editions of the documents indicated below. The most recent published edition of the document shall be used for undated references.
