Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<https://ipr.etsi.org/>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI 3rd Generation Partnership Project (3GPP).

The present document may refer to technical specifications or reports using their 3GPP identities, UMTS identities or GSM identities. These should be interpreted as being references to the corresponding ETSI deliverables.

The cross reference between GSM, UMTS, 3GPP and ETSI identities can be found under
<http://webapp.etsi.org/key/queryform.asp>.

Modal verbs terminology

In the present document "**shall**", "**shall not**", "**should**", "**should not**", "**may**", "**need not**", "**will**", "**will not**", "**can**" and "**cannot**" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

6.1.3.1	CDR content description	118
6.1.3.2	CDR triggers	119
6.1.3.2.1	Session related CDRs	119
6.1.3.2.2	Session unrelated CDRs	119
6.1.3.3	S-CSCF CDR content	120
6.1.3.4	P-CSCF CDR content	125
6.1.3.5	I-CSCF CDR content	130
6.1.3.6	MRFC CDR content.....	133
6.1.3.7	MGCF CDR content	137
6.1.3.8	BGCF CDR content	141
6.1.3.9	SIP AS CDR content.....	144
6.1.3.10	IBCF CDR content	149
6.1.3.11	E-CSCF CDR content	153
6.1.3.12	TRF CDR content	157
6.1.3.13	ATCF CDR content.....	161
6.1.3.14	TF CDR content	166
6.2	Data description for IMS online charging	170
6.2.1	Ro message contents	170
6.2.1.0	Introduction.....	170
6.2.1.1	Debit / Reserve Units Request message	171
6.2.1.2	Debit / Reserve Units Response message.....	172
6.3	IMS charging specific parameters	173
6.3.1	Definition of IMS charging information.....	173
6.3.1.0	General	173
6.3.1.1	IMS charging information assignment for Service Information	173
6.3.1.2	Definition of the IMS Information	173
6.3.2	Detailed message format for offline charging.....	177

6.3.3	Detailed message format for online charging	181
6.3.4	Formal IMS charging parameter description	184
6.3.4.1	IMS charging information for CDRs	184
6.3.4.2	IMS charging information for charging events	184
Annex A (informative):	Bibliography.....	185
Annex B (informative):	Message flows for service termination by OCS.....	186
B.0	General	186
B.1	Scenario 1 - session related (SCUR): service termination on reception of an initial SIP INVITE request	186
B.2	Scenario 2 - session related (SCUR): service termination triggered after an early SIP dialog is established	187
B.3	Scenario 3 - session related (SCUR): service termination triggered after a confirmed SIP dialog is established	190
B.4	Scenario 4 - session unrelated (ECUR): service termination on reception of an initial non-INVITE SIP request	193
B.5	Scenario 5 - session unrelated (IEC): service termination on reception of an initial non-INVITE SIP request.....	194
Annex C (informative):	Change history	195
History	199	

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 1 presented to TSG for information;
 - 2 presented to TSG for approval;
 - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

The present document is part of a series of Technical Specifications (TSs) that specify charging functionality and charging management in GSM/UMTS networks. The GSM/UMTS core network charging architecture and principles are specified in document TS 32.240 [1], which provides an umbrella for other charging management documents that specify:

- the content of the CDRs per domain and subsystem (offline charging);
- the content of real-time charging events per domain / subsystem (online charging);
- the functionality of online and offline charging for those domains and subsystems;
- the interfaces that are used in the charging framework to transfer the charging information (i.e. CDRs or charging events).

The complete document structure for these TSs is defined in TS 32.240 [1].

The present document specifies the offline and online charging description for the IP Multimedia Subsystem (IMS), based on the functional descriptions of the IMS in TS 23.228 [200]. This charging description includes the offline and online charging architecture and scenarios specific to IMS, as well as the mapping of common 3GPP charging architecture specified in TS 32.240 [1] onto IMS. It further specifies the structure and content of the CDRs for offline charging, and the charging events for online charging. The present document is related to other 3GPP charging TSs as follows:

- The common 3GPP charging architecture is specified in TS 32.240 [1];
- The parameters, abstract syntax and encoding rules for these CDR types are specified in TS 32.298 [51].
- A transaction based mechanism for the transfer of CDRs within the network is specified in TS 32.295 [54].
- The file based mechanism used to transfer the CDRs from the network to the operator's billing domain (e.g. the billing system or a mediation device) is specified in TS 32.297 [52].
- The 3GPP Diameter application that is used for IMS offline and online charging is specified in TS 32.299 [50].

All terms, definitions and abbreviations used in the present document, that are common across 3GPP TSs, are defined in the 3GPP Vocabulary, TR 21.905 [100]. Those that are common across charging management in GSM/UMTS domains, services or subsystems are provided in the umbrella document TS 32.240 [1] and are copied into clause 3 of the present document for ease of reading. Finally, those items that are specific to the present document are defined exclusively in the present document.

Furthermore, requirements that govern the charging work are specified in TS 22.115 [101].
