

Australian/New Zealand Standard™

**Information technology equipment—  
Energy performance of internal power  
supplies**

**Part 1: Methods of measurement of  
energy performance**

## **AS/NZS 5814.1:2012**

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee TE-001, Safety of Electronic Equipment. It was approved on behalf of the Council of Standards Australia on 21 June 2012 and on behalf of the Council of Standards New Zealand on 26 June 2012.

This Standard was published on 17 July 2012.

---

The following are represented on Committee TE-001:

Australian Chamber of Commerce and Industry  
Australian Communications and Media Authority  
Australian Industry Group  
Australian Information Industry Association  
Australian Subscription Television and Radio Association  
Certification Interests, New Zealand  
CHOICE  
Consumer Electronics Association of New Zealand  
Consumer Electronics Suppliers Association  
Department of Climate Change and Energy Efficiency  
Electrical Compliance Testing Association  
Electrical Regulatory Authorities Council  
Energy Efficiency and Conservation Authority of New Zealand  
Engineers Australia  
Free TV Australia  
Ministry of Economic Development, New Zealand  
Telstra Corporation

### **Keeping Standards up-to-date**

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at [www.saiglobal.com.au](http://www.saiglobal.com.au) or Standards New Zealand web site at [www.standards.co.nz](http://www.standards.co.nz) and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

---

*This Standard was issued in draft form for comment as DR AS/NZS 5814.1.*

## PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TE-001, Safety of Electronic Equipment.

The objective of this Standard is to provide designers, manufacturers, importers, test laboratories, regulators and users of computers with a test method to assess the energy efficiency of this equipment.

This Standard was prepared in response to the publication of a plan for the regulation of computers under the Equipment Energy Efficiency Program (E3) in 2004. This Standard draws upon the test method referenced in the ENERGY STAR<sup>®</sup> Program Requirements for Computers: Version 5.0 and Version 5.2 (ENERGY STAR<sup>®</sup> V5.0 and V5.2 Computer Specification) published by the United States' Environmental Protection Agency (EPA) in 2010. The EPA test method is the de facto standard in the United States. This AS/NZS Standard is technically similar to the test method specified in the *Generalized Internal Power Supply Efficiency Test Protocol Rev 6.5*.

The term 'informative' is used to define the application of the appendix to which it applies. An informative appendix is only for information and guidance.

## CONTENTS

	<i>Page</i>
<b>SECTION 1 SCOPE AND GENERAL</b>	
1.1 SCOPE.....	4
1.2 EXCLUSIONS .....	4
1.3 REFERENCED DOCUMENTS.....	5
1.4 DEFINITIONS.....	5
<b>SECTION 2 GENERAL CONDITIONS FOR MEASUREMENT</b>	
2.1 GENERAL.....	10
2.2 POWER FACTOR (PF) MEASUREMENT ACCURACY .....	10
2.3 POWER MEASUREMENTS.....	11
2.4 POWER SUPPLY.....	12
2.5 POWER SUPPLY LOADING .....	12
2.6 POWER SUPPLY FAN CONTROL.....	12
2.7 TEST D.C. LOADS .....	13
2.8 TEST SETUP .....	14
2.9 TEST ROOM.....	15
2.10 WARM-UP TIME .....	15
<b>SECTION 3 LOADING CRITERIA FOR TESTING EFFICIENCY</b>	
3.1 GENERAL PROVISIONS .....	16
3.2 PROPORTIONAL ALLOCATION METHOD FOR LOADING MULTIPLE AND SINGLE-OUTPUT A.C.–D.C. AND D.C.–D.C. POWER SUPPLIES.....	16
<b>SECTION 4 MEASUREMENT APPROACH</b>	
4.1 EUT PREPARATION .....	21
4.2 TESTING SEQUENCE .....	22
<b>SECTION 5 EFFICIENCY CALCULATION</b>	
<b>SECTION 6 TEST REPORT</b>	
6.1 GENERAL.....	25
6.2 MANDATORY INFORMATION .....	25
6.3 OPTIONAL INFORMATION .....	26
6.4 RETENTION AND AVAILABILITY OF TEST REPORTS.....	26
6.5 SAMPLE TEST REPORT .....	26
<b>APPENDICES</b>	
A EXAMPLE EFFICIENCY REPORT FOR A MULTI OUTPUT POWER SUPPLY ..	27
B INTERNAL POWER SUPPLY EXAMPLES .....	29
C SERVER POWER SUPPLY EXAMPLES .....	33

## STANDARDS AUSTRALIA/STANDARDS NEW ZEALAND

**Australian/New Zealand Standard****Information technology equipment—Energy performance of internal power supplies****Part 1: Methods of measurement of energy performance**

## SECTION 1 SCOPE AND GENERAL

**1.1 SCOPE**

This document specifies a test procedure for calculating the energy efficiency of internal a.c.–d.c. and d.c.–d.c. power supplies. Internal power supplies are located in the same housing as the product that they power. An example of this type of power supply is a desktop computer power supply that has multiple output voltages: +12 V, +5 V, +3.3 V, and –12 V (see Appendix B).

The test method in this document applies specifically to power supplies that meet the following criteria:

- (a) Power supplies that have detailed input and output ratings on their nameplate or in available literature from their manufacturer, specifying the maximum loads that can safely be placed on each individual d.c. output voltage bus and, where necessary, groupings of those voltage busses.
- (b) Power supplies that have connectors that allow the d.c. output voltage busses to be connected and disconnected from the powered product non-destructively.
- (c) Power supplies that can be detached from the housing of the product they power without causing harm to other circuits and components of the product.

This Standard also specifies the following:

- (i) Internal power supply types.
- (ii) Terminology used in the test method.
- (iii) Information required for test reports.

**1.2 EXCLUSIONS**

The following are not covered by this Standard:

- (a) External power supplies within the scope of the AS/NZS 4665 series.
- (b) A.C.–A.C. voltage transformers.
- (c) Power supplies physically integrated within the main circuit board of the device they are powering.
- (d) Power supplies that have a combination of a.c. and d.c. output voltage busses.

This Standard does not specify electrical safety requirements.
