Metal halide lamps – Performance specification

Lampes aux halogénures métalliques – Spécifications de performances

CONTENTS

FOREWORD.....	6
INTRODUCTION.....	8
1 Scope.....	10
2 Normative references	10
3 Terms and definitions	11
4 Lamp requirements.....	13
4.1 General.....	13
4.2 Marking.....	13
4.2.1 Colour appearance	13
4.2.2 Lamps for operation on high pressure sodium controlgear	13
4.3 Dimensions	14
4.4 Caps.....	14
4.5 Starting and warm-up characteristics	14
4.5.1 Lamps that may operate on electromagnetic ballasts	14
4.5.2 Lamps suitable for low frequency square wave ballasts only.....	14
4.6 Electrical characteristics	14
4.7 Photometric characteristics	14
4.8 Colour characteristics	14
4.8.1 Lamps with non-standardised chromaticity co-ordinates	14
4.8.2 Lamps with standardised chromaticity co-ordinates	15
4.8.3 Colour rendering index	15
4.8.4 Requirements and test conditions	15
4.9 Lumen maintenance and life	15
5 Information for ballast, ignitor and luminaire design.....	15
6 Data sheets	15
6.1 General principles of numbering sheets	15
6.2 Lists of data sheets.....	15
6.2.1 List of diagrammatic lamp data sheets	15
6.2.2 List of lamp data sheets.....	30
6.3 List of maximum lamp outline sheets (construction according to IEC 61126).....	361
Annex A (normative) Method of measuring lamp starting and warm-up characteristics	364
A.1 General.....	364
A.2 Measurements	364
Annex B (normative) Method of measuring electrical and photometrical characteristics (lamps for operation on 50 Hz or 60 Hz supply frequencies)	366
B.1 General.....	366
B.2 Particular requirements for double-capped lamps.....	366
B.3 Colour characteristics	367
B.4 Supply	367
B.5 Instruments	367
B.6 Measurement	367
Annex C (normative) Method of test for lumen maintenance and life	370
C.1 General.....	370
C.2 Lamps for operation on 50 Hz or 60 Hz supply frequencies	370
C.3 Lamps for operation on low frequency square wave	370

Annex D (informative) Information for luminaire design	371
D.1 Maximum lamp outlines.....	371
D.2 Replacement of lamps	371
Annex E (normative) Method of measuring electrical and photometrical characteristics on low frequency square wave reference ballast	372
E.1 General.....	372
E.2 Characteristics.....	372
E.3 Test procedure.....	372
E.3.1 General	372
E.3.2 Start-up	373
E.3.3 Steady state	373
Annex F (normative) Spectral analysis of power ripple: calculation procedure for amplitude spectrum ratio and guidance	374
F.1 General.....	374
F.2 Mathematical background	374
F.2.1 General	374
F.2.2 Description of the algorithm	374
F.3 Measurement procedure	375
F.4 Test signal	375
F.4.1 General	375
F.4.2 Description of the test signal.....	375
F.4.3 Outcome of the test signal	376
Annex G (informative) Low frequency square wave operation	377
G.1 General.....	377
G.2 Operation phases.....	377
G.3 Information relevant for square wave controlgear design.....	377
G.3.1 Breakdown	377
G.3.2 Take-over	380
G.3.3 Run-up	380
G.3.4 Steady state normal operation	381
G.3.5 Steady state extended operation	383
Annex H (informative) Information for ballast design	385
H.1 General.....	385
H.2 Explanation of the ignition schemes for pulse breakdown.....	385
Annex I (informative) Temperature limits for luminaire design	387
Annex J (informative) ILCOS codes	389
Annex K (informative) Method of measuring the bulb, pinch, reflector and base temperatures of metal halide lamps for luminaire design.....	392
K.1 General.....	392
K.2 Measurement conditions	392
K.3 Choice and attachment of thermocouples for bulb, pinch, reflector and base temperature measurements	393
K.3.1 General	393
K.3.2 Thermocouple attachment by mechanical clamping	393
K.3.3 Thermocouple attachment by adhesive	393
K.4 Thermocouple fixing point locations and lamp burning positions by metal halide lamp types.....	394
Bibliography.....	402

INTERNATIONAL ELECTROTECHNICAL COMMISSION

METAL HALIDE LAMPS – PERFORMANCE SPECIFICATION

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

DISCLAIMER

This Consolidated version is not an official IEC Standard and has been prepared for user convenience. Only the current versions of the standard and its amendment(s) are to be considered the official documents.

This Consolidated version of IEC 61167 bears the edition number 4.1. It consists of the fourth edition (2018-04) [documents 34A/2051/FDIS and 34A/2058/RVD] and its amendment 1 (2018-10) [documents 34A/2066/CDV and 34A/2103/RVC]. The technical content is identical to the base edition and its amendment.

This Final version does not show where the technical content is modified by amendment 1. A separate Redline version with all changes highlighted is available in this publication.

International Standard IEC 61167 has been prepared by subcommittee 34A: Lamps, of IEC technical committee 34: Lamps and related equipment.

This edition includes the following significant technical changes with respect to the previous edition.

- a) A set of new lamp data sheets has been introduced for lamp types designed for replacing high pressure sodium lamps.
- b) A set of new lamp data sheets has been introduced for 4200 K versions of 3000 K lamp types already in the standard.
- c) A set of new lamp data sheets has been introduced for new lamp types where high frequency ignition data is important.
- d) Annex G has been revised to incorporate high frequency ignition. As a consequence of this change, all data sheets in the standard have been revised to a new format.
- e) A new informative Annex K has been introduced, giving recommended methods of making lamp temperature measurements.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this document and its amendment will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

INTRODUCTION

A big step forward when standardising metal halide lamps and their operation was made with the second edition which was published in 2011. Meanwhile, agreements were reached for the introduction of new lamp types and in aspects of operation which led to the third edition.

Major changes in the second edition were as follows. Since IEC 62035 was published in 1999, the related lamp specific performance standards such as IEC 61167 needed to be reviewed in an editorial action, splitting performance and safety requirements, but also to include all items in abeyance, stored for this occasion. The separation had already been carried out with other HID lamps. So, in some instances, the “pilot” text of IEC 60188 was used. Moreover, the measurement part was introduced with the assistance of IEC 60188 and IEC 60081.

It may also be noted that the colour coordinates for CCT 3 000 K and 4 200 K were adjusted to a point two units below Planck in order to take account of the life time shift to higher y-values.

Apart from these basic changes which had been needed for a long time, the new technique of low frequency square wave (LFSW) operation was implemented. This led to additional pages to the existing lamp data sheets and several annexes describing and specifying the requirements. Further, detailed requirements and measurement methods for the ignition (break down/take-over/run-up) were introduced. Intense discussions took place on measurement and specification of the peak-current ratio during ignition and steady state. Workshops were held in order to come to a broad worldwide acceptance of the concepts. The workshops were open to experts from the lamp and control gear side in order to accommodate the interface between control gear and lamp to these requirements.

Further lamp types which were considered to have market relevance and needing normative support were also added.

Major changes in the third edition were as follows. Compared to the second edition, a set of new lamp data sheets (20 W, 35 W, 50 W, 100 W) was introduced. Reference to ILCOS (International lamp coding system) was removed from the lamp data sheets and located in a new annex. Information on outer bulb temperature (and in some cases also on pin temperature and temperature adjacent to cap) was replaced with an explanation on differences in manufacturers' construction; this explanation was given in detail in a new annex.

Major changes of this fourth edition are as follows. A total of 28 new data sheets have been introduced to specify lamp types designed for replacing high pressure sodium lamps, 4 200 K versions of 3 000 K lamp types already in the standard and lamp types where high frequency ignition is important. Annex G has been revised to incorporate high frequency ignition. As a consequence of this change, all data sheets in the standard have been revised to a new format. A new informative Annex K has been introduced, giving recommended methods of making lamp temperature measurements.

The International Electrotechnical Commission (IEC) draws attention to the fact that it is claimed that compliance with this document may involve the use of patents concerning the lamp given in standard sheets 1035E, 1035F, 1070C and 1070D.

IEC takes no position concerning the evidence, validity and scope of this patent right.

The holder of this patent right has assured the IEC that he/she is willing to negotiate licences either free of charge or under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statement of the holder of this patent right is registered with IEC. Information may be obtained from:

Panasonic Corporation

1-1 Saiwai-cho,
Takatsuki City,
Osaka 569-1193,
Japan

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those identified above. IEC shall not be held responsible for identifying any or all such patent rights.

ISO (www.iso.org/patents) and IEC (<http://patents.iec.ch>) maintain on-line data bases of patents relevant to their standards. Users are encouraged to consult the data bases for the most up to date information concerning patents.

METAL HALIDE LAMPS – PERFORMANCE SPECIFICATION

1 Scope

This document specifies the performance requirements for metal halide lamps for general lighting purposes.

For some of the requirements given in this document, reference is made to “the relevant lamp data sheet”. For some lamps, these data sheets are contained in this document. For other lamps, falling under the scope of this document, the relevant data are supplied by the lamp manufacturer or responsible vendor.

The requirements of this document relate only to type testing.

The requirements and tolerances specified in this document correspond to testing of a type test sample submitted by the manufacturer for that purpose. In principle this type test sample consists of units having characteristics typical of the manufacturer’s production and being as close to the production centre point values as possible.

It can be expected that with the tolerances given in this document, the product manufactured in accordance with the type test sample will comply with this document for the majority of production. Due to the production spread however, it is inevitable that there will sometimes be products outside the specified tolerances. For guidance on sampling plans and procedures for inspection by attributes, see ISO 2859-10.
