

ETSI TS 101 376-4-14 V3.4.1 (2015-10)

TECHNICAL SPECIFICATION

**GEO-Mobile Radio Interface Specifications (Release 3);
Third Generation Satellite Packet Radio Service;
Part 4: Radio interface protocol specifications;
Sub-part 14: Mobile Earth Station (MES) -
Base Station System (BSS) interface;
Radio Link Control/Medium
Access Control (RLC/MAC) protocol;
Iu Mode;
GMR-1 3G 44.160**

Reference

RTS/SES-00374-4-14

Keywords

3G, GMPRS, GMR, GPRS, GSM, GSO, MES,
mobile, MSS, radio, satellite, S-PCN

Foreword.....	10
Modal verbs terminology.....	11
Introduction	11
1 Scope	13
1.1 General	13
1.2 Related documents	13
1.3 Use of logical control channels	13
1.4 Use of logical traffic channels.....	13
1.4a Use of transport channels	13
1.5 Conventions.....	14
2 References	14
2.1 Normative references	14
2.2 Informative references.....	15
3 Definitions, symbols and abbreviations	15
3.1 Definitions.....	15
3.2 Symbols.....	16
3.3 Abbreviations	16
4 Layered overview of radio interface.....	17
4.0 Protocol architecture.....	17
4.1 Layer services.....	17
4.2 Layer functions.....	18
4.2.1 RLC function	18
4.2.2 MAC layer function	18
4.3 Service primitives.....	19
4.3.1 MAC to Physical Layer Primitives	19
4.3.2 PDCP to RLC Primitives	19
4.3.2.1 Primitives	19
4.3.2.2 Primitive parameters	20
4.3.3 RRC to RLC Primitives	20
4.3.3.1 Primitives	20
4.3.3.2 Primitive parameters	21
4.3.4 RRC to MAC Primitives.....	22
4.3.4.1 Primitives	22
4.3.4.2 Primitive Parameters	23
4.4 Services required from lower layers.....	24
5 Introduction to the Medium Access Control (MAC) procedures	24
5.1 General	24
5.2 Multiplexing principles	24
5.2.1 Temporary Block Flow	24
5.2.2 Temporary Flow Identity	25
5.2.2.1 Temporary Flow Identity for PDCH	25
5.2.2.2 Temporary Flow Identity for DCH	25
5.2.3 Uplink State Flag	25
5.2.4 Medium Access modes	25
5.2.4.1 Medium Access modes for PDCH	25
5.2.4.2 Medium Access modes for DCH	25
5.2.5 Multiplexing of GMPRS and future mobile earth stations	25
5.3 MAC States	26
5.3.1 MAC-Idle state	26
5.3.1.1 General	26
5.3.1.2 Establishment of a PDCH	26
5.3.1.3 Establishment of a DCH.....	26
5.3.2 MAC-Shared state	26

5.3.2.1	General	26
5.3.2.2	Release of all PDCHs	26
5.3.2.3	Establishment of a DCH	26
5.3.2.4	Radio bearer reconfiguration	26
5.3.3	MAC-DTM state	26
5.3.3.1	General	26
5.3.3.2	Release of all PDCHs	27
5.3.3.3	Release of all DCHs	27
5.3.3.4	Release of all PDCHs and DCHs	27
5.3.4	MAC-Dedicated state	27
5.3.4.1	General	27
5.3.4.2	Release of all DCHs	27
5.3.4.3	Radio bearer reconfiguration	27
5.3.4.4	Establishment of a PDCH	27
5.3.4.5	Establishment of DCH	27
5.3.5	MAC state machine	27
5.4	General MAC procedures in MAC-Idle state and MAC-Shared state	28
5.4.1	Mobile station side	28
5.4.1.1	General	28
5.4.1.2	Cell (Spotbeam) reselection	28
5.4.1.3	Network Assisted Cell Change	29
5.4.1.4	Release of DCHs	29
5.4.1.4.1	General	29
5.4.1.4.2	Continuation of PBCCH information	29
5.4.1.4.3	Receipt of PSI14 message in MAC-DTM state	29
5.4.1.5	System information on PBCCH	29
5.4.1.6	System information on BCCH	29
5.4.1.6.1	General	29
5.4.1.6.2	Establishment of PBCCH	29
5.4.1.6.3	Void	29
5.4.1.7	Void	29
5.4.1.8	Discontinuous reception (DRX)	29
5.4.1.9	Page mode procedures on PCCCH	30
5.4.1.10	Frequency Parameters	30
5.4.1.11	G-RNTI Management	30
5.4.2	Network side	30
5.4.2.1	System Information broadcasting	30
5.4.2.1.1	System information on PBCCH	30
5.4.2.1.2	System information on BCCH	30
5.4.2.1.3	System information on PACCH (and other logical channels)	30
5.4.2.1.4	Consistent sets of system information messages	30
5.4.2.2	Paging	30
5.4.2.3	Network Assisted Cell Change	30
5.5	Measurement reports	30
5.5.1	General	30
5.5.2	Network Control (NC) measurement reporting	30
5.5.3	Void	30
5.5.4	Additional measurement and reporting parameters	30
5.6	Mapping of Signalling Radio Bearers (SRB) onto logical channels	31
5.6.1	Downlink	31
5.6.2	Uplink	31
5.6.2.1	MAC-Dedicated State	31
5.6.2.2	MAC-Shared State	31
5.6.2.3	MAC-DTM State	31
5.7	Multiplexing principles with Flexible Layer One	32
5.7.1	General	32
5.7.2	Multiplexing between user-plane and control-plane	32
6	Paging procedures	32
6.1	General	32
6.2	Paging initiation in MAC-Idle state	32
6.3	Paging initiation in MAC-Shared state	32

6.4	Reception of PACKET PAGING REQUEST by an MS.....	32
7	Medium Access Control (MAC) procedures on PCCCH.....	33
7.1	General	33
7.2	TBF establishment initiated by the mobile earth station on PCCCH	33
7.2.1	General.....	33
7.2.2	Permission to access the network	33
7.2.3	Initiation of a TBF establishment	33
7.2.3.1	Initiation of the packet access procedure	33
7.2.3.1.1	General	33
7.2.3.1.2	Access persistence control on PRACH.....	34
7.2.3.2	Packet assignment procedure	34
7.2.3.2.1	On receipt of a PACKET CHANNEL REQUEST or PACKET CHANNEL REQUEST TYPE 2 message.....	34
7.2.3.3	Contention resolution at one phase access	35
7.2.3.4	RLC/MAC procedures during contention resolution	36
7.2.3.4.1	RLC/MAC procedures during contention resolution on PDCHs.....	36
7.2.3.4.2	RLC/MAC procedures during contention resolution on DCHs.....	36
7.2.3.5	One phase packet access completion.....	36
7.2.3.5.1	One phase packet access completion on PDCHs.....	36
7.2.3.5.2	One phase packet access completion on DCHs	36
7.2.3.6	Timing Advance.....	36
7.2.3.6.1	Timing advance on PDCHs	36
7.2.3.6.2	Timing advance on DCHs	36
7.2.4	TBF establishment using two phase access	36
7.2.5	Abnormal cases.....	36
7.3	TBF establishment initiated by the network on CCCH.....	37
7.4	Procedure for measurement report sending in MAC-Idle state	37
7.5	Cell Change Order procedures in MAC-Idle state	37
8	Medium Access Control (MAC) procedures on PDCH	37
8.1	General	37
8.2	Transfer of RLC data blocks	38
8.2.1	Medium access mode.....	38
8.2.2	Uplink RLC data block transfer.....	38
8.2.2.0	General	38
8.2.2.0.1	General	38
8.2.2.0.2	Establishment of additional uplink TBF(s).....	38
8.2.2.0.3	Uplink resource reallocation/reconfiguration	38
8.2.2.0.4	Establishment of downlink TBF(s).....	39
8.2.2.0.5	Network initiated Establishment of Uplink TBF.....	39
8.2.2.1	Dynamic Allocation uplink RLC data block transfer.....	39
8.2.2.1.0	General	39
8.2.2.1.1	PACCH operation.....	39
8.2.2.1.2	Resource Allocation/Reallocation for Uplink.....	39
8.2.2.1.3	Establishment of downlink TBF.....	41
8.2.2.2	Extended Dynamic Allocation uplink RLC data block transfer	42
8.2.2.3	Exclusive Allocation uplink RLC data block transfer.....	42
8.2.2.4	Network initiated release of uplink TBF.....	42
8.2.2.5	Abnormal cases	43
8.2.3	Downlink RLC data block transfer	43
8.2.3.1	General	43
8.2.3.1.0	General	43
8.2.3.1.1	Downlink resource reallocation.....	43
8.2.3.1.2	Void.....	44
8.2.3.2	Downlink RLC data block transfer procedure	44
8.2.3.2.0	General	44
8.2.3.2.1	Abnormal cases	44
8.2.3.3	Polling for Packet Downlink Ack/Nack.....	45
8.2.3.4	Resource Reassignment for downlink.....	45
8.2.3.5	Establishment of uplink TBF	46
8.2.3.5.0	General	46

8.2.3.5.1	Abnormal cases	46
8.2.3.6	Network initiated abnormal release of downlink TBF	47
8.3	Packet PDCH Release	47
8.4	Procedure for measurement report sending in MAC-Shared state	47
8.5	Network Controlled cell reselection procedures in MAC-Shared state	47
8.6	Measurement Order procedures in MAC-Shared state	47
8.7	Packet Control Acknowledgement	47
8.8	Abnormal cases	47
8.8.1	General	47
8.8.2	Abnormal release without retry	47
8.8.3	Abnormal release with access retry	48
8.8.4	Abnormal release with system information	48
8.8.5	Abnormal release of an Uplink TBF with access retry	48
8.8.6	Abnormal release of a Downlink TBF	48
8.9	Network Assisted Cell Change procedures in MAC-Shared state	48
8.10	Packet Link Quality Reporting	48
8.11	Initiation of Packet access procedure following handover	48
9	Medium Access Control (MAC) procedures on DCH	49
9.1	General	49
9.2	Transfer of RLC/MAC blocks	49
9.2.0	General	49
9.2.1	Dedicated allocation	49
9.2.1.1	General	49
9.2.1.2	Void	50
9.2.1.3	Void	50
9.2.2	Transfer of RLC/MAC blocks on DTCH	50
9.2.3	Transfer of RLC/MAC blocks on DACCH	50
9.2.4	Transfer of RLC/MAC blocks on PDTCH and PACCH	51
9.2.5	Transfer of RLC/MAC blocks on UDCH, CDCH and ADCH	51
9.3	PACKET CONTROL ACKNOWLEDGEMENT	51
9.3a	Handover Access and Physical Information	51
9.3a.1	Handover Access	51
9.3a.2	Physical Information	52
9.4	Abnormal cases	52
10	Radio Link Control (RLC) procedures on PDTCH and PACCH	52
10.1	General	52
10.2	Procedures and parameters for peer-to-peer operation	52
10.2.1	Send state variable V(S)	52
10.2.2	Control send state variable V(CS)	52
10.2.3	Acknowledge state variable V(A)	52
10.2.4	Acknowledge state array V(B)	52
10.2.5	Block sequence number BSN	53
10.2.6	Receive state variable V(R)	53
10.2.7	Receive window state variable V(Q)	53
10.2.8	Receive state array V(N)	53
10.2.9	Starting sequence number (SSN) and received block bitmap (RBB)	53
10.2.10	Window Size	53
10.2.10a	RLC buffer	53
10.2.11	Compression	53
10.2.12	Segmentation of upper layer PDUs into RLC data units	53
10.2.13	Re-assembly of upper layer PDUs from RLC data units	54
10.2.14	Segmentation of RLC/MAC control messages into RLC/MAC control blocks	54
10.2.15	Re-assembly of RLC/MAC control messages from RLC/MAC control blocks	54
10.3	Operation during RLC/MAC control message transfer	54
10.4	Operation during RLC data block transfer	54
10.4.1	General	54
10.4.2	Countdown procedure	54
10.4.3	Delayed release of downlink Temporary Block Flow	54
10.4.4	Extended uplink TBF mode	54
10.4.5	Acknowledged mode operation	54

10.4.5.1	General	54
10.4.5.2	Void.....	54
10.4.5.3	Establishment of Temporary Block Flow	54
10.4.5.4	Operation of uplink Temporary Block Flow.....	54
10.4.5.5	Release of uplink Temporary Block Flow	54
10.4.5.6	Operation of downlink Temporary Block Flow	55
10.4.5.7	Release of downlink Temporary Block Flow.....	55
10.4.6	Unacknowledged mode operation.....	55
10.4.6.1	General	55
10.4.6.2	Establishment of Temporary Block Flow	55
10.4.6.3	Operation of uplink Temporary Block Flow.....	55
10.4.6.4	Release of uplink Temporary Block Flow	55
10.4.6.5	Operation of downlink Temporary Block Flow	55
10.4.6.6	Release of downlink Temporary Block Flow.....	55
10.5	Abnormal release cases	55
10.5.1	Abnormal release with access retry	55
10.5.2	Abnormal release with cell reselection	55
10.6	Uplink TBF release in extended uplink TBF mode.....	55
11	Radio Link Control (RLC) procedures on DTCH and DACCH	55
11.1	General	55
11.2	Procedures and parameters for peer-to-peer operation.....	56
11.2.1	Send state variable V(S)	56
11.2.2	Control send state variable V(CS).....	56
11.2.3	Acknowledge state variable V(A).....	56
11.2.4	Acknowledge state array V(B).....	56
11.2.5	Block sequence number BSN	56
11.2.5.1	Block sequence number for TCH TBF mode.....	56
11.2.5.2	Block sequence number for DCCH TBF mode.....	56
11.2.6	Reduced block sequence number RBSN	56
11.2.7	Receive state variable V(R)	56
11.2.8	Receive window state variable V(Q)	56
11.2.9	Receive state array V(N).....	56
11.2.10	Starting sequence number (SSN) and received block bitmap (RBB)	56
11.2.11	Window Size.....	56
11.2.11.1	DTCH.....	56
11.2.11.2	DACCH.....	57
11.2.11a	RLC buffer.....	57
11.2.12	Segmentation of upper layer PDUs into RLC data units	57
11.2.13	Re-assembly of upper layer PDUs from RLC data units	57
11.2.14	Segmentation of RLC/MAC control messages into RLC/MAC control blocks	57
11.2.15	Re-assembly of RLC/MAC control messages from RLC/MAC control blocks	57
11.3	Operation during RLC/MAC control message transfer.....	58
11.4	Operation during RLC data block transfer	58
11.4.1	General.....	58
11.4.2	Acknowledged mode operation	58
11.4.2.1	General	58
11.4.2.2	On DTCH.....	58
11.4.2.2.1	General	58
11.4.2.2.2	Uplink.....	58
11.4.2.2.3	Downlink	58
11.4.2.3	On DACCH.....	58
11.4.2.3.1	General	58
11.4.2.3.2	Uplink.....	58
11.4.2.3.3	Downlink	59
11.4.2.3.4	TBF Release	59
11.4.3	Unacknowledged mode operation.....	60
11.4.3.1	General	60
11.4.3.2	On DTCH.....	60
11.4.3.2.1	Uplink.....	60
11.4.3.2.2	Void.....	60
11.4.3.3	On DACCH.....	60

11.4.3.3.1	Uplink.....	60
11.4.3.3.2	Downlink.....	60
11.4.3.3.3	TBF Release.....	60
11.4.4	Transparent mode operation (TCH TBF mode only).....	61
11a	Radio Link Control (RLC) procedures for FLO on UDCH, ADCH.....	61
12	RLC/MAC block structure.....	61
12.1a	RLC/MAC block structure on PDCH.....	61
12.1b	RLC/MAC block structure on DACCH.....	61
12.2	RLC/MAC block format conventions.....	62
12.3	Spare Bits.....	62
12.4	RLC/MAC Header formats on PDCH.....	62
12.4.1	Downlink RLC/MAC Header.....	62
12.4.1a	Transparent Mode Downlink RLC/MAC Block on PDCH.....	62
12.4.2	Uplink RLC/MAC Header.....	62
12.4.2a	Transparent Mode Uplink RLC/MAC Block on PDCH.....	63
12.5	RLC/MAC control blocks (PACCH).....	63
12.6	Void.....	63
12.7	RLC/MAC Header formats on DACCH.....	63
12.7.1	Downlink RLC/MAC Data Header.....	63
12.7.2	Downlink RLC/MAC Control Header.....	64
12.7.3	Uplink RLC/MAC Data Header.....	64
12.7.4	Uplink RLC/MAC Control Header.....	64
12.8	RLC/MAC block format on TCH (NT-RLC).....	65
12.9	Header fields.....	65
12.9.1	General.....	65
12.9.2	Reduced Radio Bearer identity (RRBid) field.....	65
12.9.3	Extension (E) bit.....	65
12.9.4	Stall Indicator (SI) bit.....	65
12.9.5	Reduced Block Sequence Number (RBSN) field.....	65
12.9.6	Radio Bearer Identity (RBid) field.....	65
12.9.7	Payload Type field.....	65
12.9.8	Payload Subtype field.....	65
12.9.9	Reduced Last Part Size.....	66
12.9.10	Unsolicited Uplink Grant (UUG) field.....	66
12.9.11	Final Block Indicator (FBI) field.....	66
13	Ciphering.....	66
13.1	General.....	66
13.2	Applicability of ciphering.....	66
13.3	Ciphering at RLC sublayer.....	67
13.3.1	General.....	67
13.3.2	Parameter settings.....	67
13.3.2.1	Input parameters to the ciphering algorithm.....	67
13.3.2.2	Handling of the HFN.....	67
13.3.3	Ciphering of RLC PDUs in non-transparent RLC mode.....	68
13.4	Ciphering at MAC sublayer.....	68
13.4.1	General.....	68
13.4.2	Parameter settings.....	68
13.4.2.1	Input parameters to the ciphering algorithm.....	68
13.4.2.2	Handling of the HFN.....	69
13.4.2.2.1	Ciphering in transparent RLC mode.....	69
13.4.2.2.2	Ciphering of RLC/MAC control messages.....	69
13.4.3	Ciphering of RLC/MAC control messages.....	69
13.4.4	Ciphering of RLC PDUs in transparent RLC mode.....	69
13.4.5	AES-256 Ciphering.....	69
13.4.5.0	General.....	69
13.4.5.1	Encryption/Decryption.....	69
13.4.5.2	Key Stream Generation.....	69
14	RLC suspension, stop and re-establishment procedures.....	70
14.1	General.....	70

14.2 Local suspend/resume function (NT-RLC)70

14.3 Stop/continue function (NT-RLC)71

14.4 RLC re-establishment function (NT-RLC).....71

Annex A (informative): Bibliography.....73

Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://ipr.etsi.org>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI Technical Committee Satellite Earth Stations and Systems (SES).

The contents of the present document are subject to continuing work within TC-SES and may change following formal TC-SES approval. Should TC-SES modify the contents of the present document it will then be republished by ETSI with an identifying change of release date and an increase in version number as follows:

Version 3.m.n

where:

- the third digit (n) is incremented when editorial only changes have been incorporated in the specification;
- the second digit (m) is incremented for all other types of changes, i.e. technical enhancements, corrections, updates, etc.

The present document is part 4, sub-part 14 of a multi-part deliverable covering the GEO-Mobile Radio Interface Specifications (Release 3) Third Generation Satellite Packet Radio Service, as identified below:

Part 1: "General specifications";

Part 2: "Service specifications";

Part 3: "Network specifications";

Part 4: "Radio interface protocol specifications";

Sub-part 1: "Mobile Earth Station-Gateway Station System (MES-GSS) Interface; GMR-1 04.001";

Sub-part 2: "GMR-1 Satellite Network Access Reference Configuration; GMR-1 04.002";

Sub-part 3: "Channel Structures and Access Capabilities; GMR-1 04.003";

Sub-part 4: "Layer 1 General Requirements; GMR-1 04.004";

Sub-part 5: "Data Link Layer General Aspects; GMR-1 04.005";

Sub-part 6: "Mobile earth Station-Gateway Station Interface Data Link Layer Specifications; GMR-1 04.006";

Sub-part 7: "Mobile Radio Interface Signalling Layer 3 General Aspects; GMR-1 3G 24.007";

Sub-part 8: "Mobile Radio Interface Layer 3 Specifications; GMR-1 3G 44.008";

Sub-part 9: "Performance Requirements on the Mobile Radio Interface; GMR-1 04.013";

Modal verbs terminology

In the present document "shall", "shall not", "should", "should not", "may", "need not", "will", "will not", "can" and "cannot" are to be interpreted as described in clause 3.2 of the [ETSI Drafting Rules](#) (Verbal forms for the expression of provisions).

"**must**" and "**must not**" are **NOT** allowed in ETSI deliverables except when used in direct citation.

Introduction

GMR stands for GEO (Geostationary Earth Orbit) Mobile Radio interface, which is used for Mobile Satellite Services (MSS) utilizing geostationary satellite(s). GMR is derived from the terrestrial digital cellular standard GSM and supports access to GSM core networks.

The present document is part of the GMR Release 3 specifications. Release 3 specifications are identified in the title and can also be identified by the version number:

- Release 1 specifications have a GMR 1 prefix in the title and a version number starting with "1" (V1.x.x).
- Release 2 specifications have a GMPRS 1 prefix in the title and a version number starting with "2" (V2.x.x).
- Release 3 specifications have a GMR-1 3G prefix in the title and a version number starting with "3" (V3.x.x).

The GMR release 1 specifications introduce the GEO-Mobile Radio interface specifications for circuit mode Mobile Satellite Services (MSS) utilizing geostationary satellite(s). GMR release 1 is derived from the terrestrial digital cellular standard GSM (phase 2) and it supports access to GSM core networks.

The GMR release 2 specifications add packet mode services to GMR release 1. The GMR release 2 specifications introduce the GEO-Mobile Packet Radio Service (GMPRS). GMPRS is derived from the terrestrial digital cellular standard GPRS (included in GSM Phase 2+) and it supports access to GSM/GPRS core networks.

The GMR release 3 specifications evolve packet mode services of GMR release 2 to 3rd generation UMTS compatible services. The GMR release 3 specifications introduce the GEO-Mobile Radio Third Generation (GMR-1 3G) service. Where applicable, GMR-1 3G is derived from the terrestrial digital cellular standard 3GPP and it supports access to 3GPP core networks.

Due to the differences between terrestrial and satellite channels, some modifications to the GSM or 3GPP standard are necessary. Some GSM and 3GPP specifications are directly applicable, whereas others are applicable with modifications. Similarly, some GSM and 3GPP specifications do not apply, while some GMR specifications have no corresponding GSM or 3GPP specification.

Since GMR is derived from GSM and 3GPP, the organization of the GMR specifications closely follows that of GSM or 3GPP as appropriate. The GMR numbers have been designed to correspond to the GSM and 3GPP numbering system. All GMR specifications are allocated a unique GMR number. This GMR number has a different prefix for Release 2 and Release 3 specifications as follows:

- Release 1: GMR n xx.zyy.
- Release 2: GMPRS n xx.zyy.
- Release 3: GMR-1 3G xx.zyy.

where:

- x.0yy ($z = 0$) is used for GMR specifications that have a corresponding GSM or 3GPP specification. In this case, the numbers xx and yy correspond to the GSM or 3GPP numbering scheme.
- xx.2yy ($z = 2$) is used for GMR specifications that do not correspond to a GSM or 3GPP specification. In this case, only the number xx corresponds to the GSM or 3GPP numbering scheme and the number yy is allocated by GMR.
- n denotes the first ($n = 1$) or second ($n = 2$) family of GMR specifications.

A GMR system is defined by the combination of a family of GMR specifications and GSM and 3GPP specifications as follows:

- If a GMR specification exists it takes precedence over the corresponding GSM or 3GPP specification (if any). This precedence rule applies to any references in the corresponding GSM or 3GPP specifications.

NOTE: Any references to GSM or 3GPP specifications within the GMR specifications are not subject to this precedence rule. For example, a GMR specification may contain specific references to the corresponding GSM or 3GPP specification.

- If a GMR specification does not exist, the corresponding GSM or 3GPP specification may or may not apply. The applicability of the GSM or 3GPP specifications is defined in ETSI TS 101 376-1-2 [2].

1 Scope

1.1 General

The present document specifies procedures for the following layers of the radio interface (*Um* reference point), the interface between the GSM/EDGE Radio Access Network (GERAN) and the Mobile Station (MS) in GERAN *Iu mode*:

- Radio Link Control (RLC).
- Medium Access Control (MAC), including Physical Link Control functions.

1.2 Related documents

The following documents provide information related to the present document:

- ETSI TS 101 376-3-23 [9] is an overall description of the GSM/EDGE Radio Access Network (GERAN) in *Iu mode*.
- ETSI TS 101 376-4-4 [3] specifies services offered by the physical layer of the *Um* reference point. It also specifies control channels. RLC and MAC use these services and control channels.
- ETSI TS 101 376-4-7 [13] specifies, in general terms, this protocol's structured functions, its procedures and its relationship with other layers and entities. It also specifies the basic message format and error handling applied by layer 3 protocols.
- ETSI TS 101 376-4-13 [4] specifies the RRC procedures when operating in *Iu mode*.
- ETSI TS 101 376-4-12 [10] specifies RLC/MAC procedures specific to *A/Gb mode* as well as the procedures that are common to both *A/Gb mode* and *Iu mode*. It also specifies the messages and Information Elements for both modes.

1.3 Use of logical control channels

ETSI TS 101 376-5-2 [5] defines the following logical control channels:

- Broadcast Control Channel (BCCH): downlink only, used to broadcast Cell specific information.
- Packet Random Access Channel (PRACH): uplink only, used to request GPRS resources.
- Packet Access Grant Channel (PAGCH): downlink only, used to allocate GPRS resources.
- Packet Associated Control Channel (PACCH): bi-directional, associated with a Temporary Block Flow (TBF).
- Packet Timing advance control channel uplink (PTCCH/U): used to transmit random access bursts to allow estimation of the timing advance for one MS in transfer state.
- Packet Timing advance control channel downlink (PTCCH/D): used to transmit timing advance updates for several MS. One PTCCH/D is paired with several PTCCH/Us.

1.4 Use of logical traffic channels

ETSI TS 101 376-5-2 [5] defines the following logical traffic channels used by RLC and MAC:

- Dedicated Traffic Channel (DTCH): bidirectional, carries encoded speech on a dedicated channel (DCH).
- Packet Data Traffic Channel (PDTCH): downlink or uplink, carries user data.

1.4a Use of transport channels

FLO is not supported in GMR-1 3G.
